## SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- . . . figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . nombres indisponibles.
- . . . n'ayant pas lieu de figurer.
- néant ou zéro.
- - nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

## NOTES ON PRICES AND PRICE INDEX NUMBERS

### Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) moved 0.3% lower in June to 190.2 from the revised May index of 190.7. The index, however, was 11.9% higher than the June 1974 index of 169.9.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were decreases recorded in the petroleum and coal products industries (1.0%) particularly in the petroleum refining (1.0%). Decreases also occurred in the food and beverages index (0.6%) reflecting lower prices in the sugar refineries (18.0%) and flour mills (3.4%). Lower prices recorded in the metal rolling, casting and extruding products (3.1%) were mainly responsible for lower levels of the primary metals group.

Increases for the period were relatively insignificant. The more notable occurred in non-metallic mineral products group (0.3%) and in leather industries group (0.7%).

## NOTES SUR LES PRIX ET LES INDICES DE PRIX

### Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (ensemble des industries manufacturières) a régressé de 0.3% en juin, tombant de 190.7 (indice rectifié de mai) à 190.2. L'indice dépasse néanmoins de 11.9% celui de juin 1974, qui s'élevait à 169.9.

Du point de vue de la contribution relative à la variation globale de l'indice de l'ensemble des industries manufacturières, les changements les plus importants ont été les baisses relevées dans les industries des produits du pétrole et du charbon (1.0%), notamment dans celle du raffinage du pétrole (1.0%). L'indice des aliments et des boissons a également accusé des baisses (0.6%), par suite d'une diminution des prix dans les raffineries de sucre (18.0%) et les meuneries (3.4%). Le fléchissement des prix dans le secteur du laminage, du moulage et de l'extrusion des métaux (3.1%) explique au premier chef les niveaux plus bas observés dans le groupe des métaux de première transformation.

Les majorations de la période ont été relativement peu importantes. Les plus notables se sont produites dans le groupe des produits minéraux non métalliques (0.3%) et celui des industries du cuir (0.7%).

## General Wholesale Price Index (1935-39=100)

The general wholesale price index declined 0.3% in June to 483.6 from the revised May index of 485.2. It was 6.8% higher than a year earlier. Six of the eight major groups decreased, while one increased and one remained the same.

The vegetable products group index decreased 2.1% in June to 430.5 from the revised May index of 439.7 due mainly to lower prices recorded for sugar and its products 18.3%, vegetable oil products 7.2%, fresh fruits 3.4% and grains 3.1%. The wood products group index declined 0.6% to 654.3 from the revised May index of 658.5 due to decreases in spruce 2.8%, fir 1.7%, pine lumber 0.8%, and newsprint and wrapping paper 0.7%. The non-ferrous products group index decreased 0.5% reflecting decreases in lead and its products 14.0%, antimony 5.1%, solder 2.0% and gold 1.7%. The textile products group index declined 0.4% mainly due to decreases in miscellaneous fibre products 9.1% and raw cotton 0.7%. The iron products group index declined 0.3% reflected by a 7.0% decrease in the price of scrap iron and steel. Lower prices recorded for organic chemicals 4.2%, paint and paint materials 1.3% and explosives 0.1% were responsible for a 0.2% decrease in chemical products.

The animal products group index rose 2.0% in June to 546.0 from the revised May index of 535.1 with the most significant increases in live-stock 5.6%, cured meats 5.3%, furs 5.1%, and fish 1.8%. The non-metallic minerals group index remained the same.

## Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a baissé de 0.3% en juin, passant de 485.2 (indice rectifié de mai) à 483.6. Il dépasse de 6.8% celui calculé un an plus tôt. Sur les huit grands groupes, six ont diminué, un a augmenté et un est demeuré inchangé.

L'indice du groupe des produits d'origine végétale a fléchi de 2.1% en juin, passant de 439.7 (indice rectifié de mai) à 430.5, principalement par suite de la baisse du prix du sucre et de ses produits (18.3%), des produits des huiles végétales (7.2%), des fruits frais (3.4%) et des céréales (3.1%). L'indice du groupe des produits du bois est tombé de 658.5 (indice rectifié de mai) à 654.3, soit une diminution de 0.6%, en raison des baisses relevées pour l'épinette (2.8%), le sapin (1.7%), le bois de pin (0.8%) ainsi que le papier journal et le papier d'emballage (0.7%). L'indice du groupe des produits non ferreux a régressé de 0.5%, des diminutions ayant été observées dans le cas du plomb et de ses produits (14.0%), de l'antimoine (5.1%), de la soudure (2.0%) et de l'or (1.7%). L'indice du groupe des produits textiles a marqué un recul de 0.4%, en grande partie par suite des baisses relevées pour les produits de fibres divers (9.1%) et le coton brut (0.7%). L'indice du groupe des produits du fer a fléchi de 0.3%, le prix des déchets de fer et d'acier ayant accusé une baisse de 7.0%. La diminution du prix des produits chimiques organiques (4.2%), des matières d'impression et de peinture (1.3%) et des explosifs (0.1%) explique le recul de 0.2% des produits chimiques.

Le groupe des produits d'origine animale a progressé de 2.0% en juin, passant de 535.4 (indice rectifié de mai) à 546.0; les majorations les plus importantes ont été relevées pour le bétail (5.6%), les viandes traitées (5.3%), les fourrures (5.1%) et le poisson (1.8%). L'indice du groupe des minéraux non métalliques est demeuré stationnaire.

## **Security Price Indexes (1971=100)**

The investors' index of common stocks rose 0.4% to 106.0 in June from 105.6 in May. The thirteen industrials registered six decreases and seven increases leaving the major group industrials relatively unchanged at 109.0. Textile and clothing reported the largest increase (5.6%) to 128.4. A decline of 1.2% in utilities and services reflected decreases of 1.4% and 2.5% in transportation (111.4) and pipelines (69.5) respectively. The major group finances gained 3.9% to 124.7 due to increases in its two main components. Banks rose 4.0% to 130.3 and investment and loans gained 4.6% to 113.3.

The index of mining stocks advanced 0.8%. A 3.0% increase in golds to 227.1 was offset by a 2.9% decrease in base metals to 68.0.

The two supplementary indexes showed substantial gains. Uraniums rose 13.8% to 188.4 and primary oils and gas increased 5.4% to 86.4.

The preferred stock index gained 0.2% to 85.1.

## **Canadian Farm Products Index (1935-39=100)**

The price index of Canadian farm products at terminal markets advanced 3.4%, to 512.3 in June from 495.4 in May. The field products index moved up 4.1% to 404.5 from 388.6 on price increases for potatoes on both Eastern and Western markets, for corn and wheat in the East, and for rye in the West. Lower prices were shown for hay on both markets, for barley, rye and oats in the East, and for flax in the West.

The animal products increased 3.8% to 620.1 in June from the revised May index of 602.2. Higher prices were shown for hogs and steers on both Eastern and Western markets, for butterfat and cheesemilk in the East, and for calves and eggs in the West. Lower prices were shown for lambs on both markets and for eggs and raw wool in the East.

## **Thirty Industrial Materials Price Index (1935-39=100)**

The price index of thirty industrial materials, calculated as an unweighted geometric average, declined 2.9% to 469.7 in June from the revised May index of 483.8. Prices were lower for fourteen commodities, higher for three and unchanged for thirteen. Principal changes included decreases for lead, raw sugar, sisal, cotton seed oil, linseed oil, raw cotton, spruce lumber, domestic wheat, oats, iron ore and bleached sulphite pulp while increases were recorded for hogs, steers and beef hides.

## **Indices des cours des valeurs mobilières (1971=100)**

L'indice des cours des actions ordinaires a augmenté de 0.4%, passant de 105.6 en mai à 106.0 en juin. Des treize sous-groupes des valeurs industrielles, six ont diminué tandis que les sept autres ont augmenté. Le groupe des valeurs industrielles est donc demeuré pratiquement inchangé à 109.0. C'est dans le textile et le vêtement que l'on a observé la plus forte augmentation, soit 5.6%, ce qui a porté l'indice à 128.4. La baisse de 1.2% de l'indice des services publics est attribuable à la diminution de 2.4% du transport (111.4) et de 2.5% des pipe-lines (69.5). Le groupe des finances a augmenté de 3.9% pour se fixer à 124.7 à cause de l'augmentation de 4.0% des banques (130.3) et de 4.6% des placements et prêts (113.3).

L'indice des titres miniers a progressé de 0.8%. L'augmentation de 3.0% des aurifères (227.1) a été compensée par une diminution de 2.9% des métaux communs (68.0).

Pour ce qui est des deux indices supplémentaires, on a enregistré de fortes augmentations. L'uranium a progressé de 13.8% pour s'établir à 188.4 et le pétrole et le gaz primaires ont augmenté de 5.4% pour se fixer à 86.4.

L'indice des actions privilégiées a augmenté de 0.2% pour passer à 85.1.

## **Indice des prix des produits agricoles canadiens (1935-39=100)**

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 3.4% de mai à juin, passant de 495.4 à 512.3. L'indice des produits de grande culture a augmenté de 4.1%, grimpant de 388.6 à 404.5, par suite de majorations du prix des pommes de terre sur les marchés de l'Est et de l'Ouest, du maïs et du blé dans l'Est et du seigle dans l'Ouest. Des baisses de prix ont été observées pour le foin sur les deux marchés, l'orge, le seigle et l'avoine dans l'Est et le lin dans l'Ouest.

L'indice des produits d'origine animale a marqué une avance de 3.8% passant de 602.2 en mai (indice rectifié) à 620.1 en juin. On a pu relever une majoration du prix des porcs et des bouvillons tant sur le marché de l'Est que sur celui de l'Ouest, du gras de beurre (matières butyreuses) et du lait de fromagerie dans l'Est et des veaux et des oeufs dans l'Ouest. Une baisse de prix a été observée pour les agneaux sur les deux marchés, ainsi que pour les oeufs et la laine brute dans l'Est.

## **Indice des prix de trente matières industrielles (1935-39=100)**

L'indice des prix de trente matières industrielles, qui se présente sous la forme d'une moyenne géométrique non pondérée, a fléchi de 2.9%, tombant de 483.8 en mai (indice rectifié) à 469.7 en juin. Les prix de quatorze produits ont baissé, ceux de trois ont augmenté et ceux de treize sont demeurés inchangés. Au nombre des principales variations, on compte des diminutions dans le cas du plomb, du sucre brut, du sisal, de l'huile de graine de coton, de l'huile de lin, du coton brut, du bois d'épinette, du blé de provenance intérieure (canadien), de l'avoine, du minerai de fer, de la pâte sulfitée (décolorée); il convient également de mentionner les majorations du prix des porcs, des bouvillons et des peaux d'abattoir.

## The Consumer Price Index

The Consumer Price Index for Canada (1961=100) advanced 1.5% to 184.0 in June from 181.3 in May, with higher food prices, especially for meat, accounting for over three-fifths of this increase which was the largest since May 1974. The index for All-Items excluding Food climbed 0.8% in the latest month, maintaining about the same rate of change experienced during the last six months. Between June 1974 and June 1975, the total CPI advanced 10.4%.

(It is to be noted that the gasoline excise increase of \$0.10 per gallon imposed in the latter part of June is not reflected in this CPI. Preliminary indications are that most retail outlets had raised their gasoline prices by the end of the month. The impact of this tax alone would increase next month's total CPI by nearly one-half of one percent).

Over half of the 3.3% rise in the Food index in the latest month was due to an 18% advance in average beef prices recorded in early June, which brought their level up to that of twelve months previous. Pork prices also advanced between May and June, moving up nearly 10% to a level over 37% above a year earlier. Fresh produce prices, which usually rise in June, registered increases of 10.4% for fresh vegetables and 6.0% for fresh fruit. In contrast, sugar prices continued their steady downward movement since the end of last year, decreasing 21.5% in the latest month.

The advance of 0.8% in the All-Items excluding Food index was principally attributable to higher shelter costs for both owned and rented accommodation, as well as increased prices of items associated with the operation and maintenance of the household, including higher prices for appliances. Other notable contributors to this rise included higher charges for dry cleaning and laundry services, increased inter-city air, rail and bus fares and higher prices for recreation equipment.

Viewed in terms of price movements between goods and services, from May to June, goods increased 1.8% while the prices of services advanced 1.1%.

On a seasonally adjusted basis, the All-Items Consumer Price Index advanced 1.4% between May and June, including a 3.1% increase in the Food index and a 0.8% rise in the index for All-Items excluding Food. In June, the *current* annual rate of change in the CPI(1), based on the seasonally adjusted movement since three months earlier was 11.2%, substantially higher than the rate of about 7% recorded over the preceding three months, with the sharp increase in food prices being the main cause.

## L'indice des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) a progressé de 1.5% pour passer de 181.3 en mai à 184.0 en juin, en raison de l'augmentation du prix des aliments et en particulier de la viande, progression qui a représenté plus des trois cinquièmes de l'augmentation totale, soit la plus importante depuis mai 1974. L'indice d'ensemble (à l'exclusion des aliments) s'est accru aussi en juin conservant à peu près le taux de variation des six derniers mois. Entre juin 1974 et juin 1975, l'IPC global a progressé de 10.4%.

(Il est à noter que l'IPC ne prend pas en compte la hausse de la taxe d'accise sur l'essence, de 10¢ le gallon, imposée à la fin de juin. D'après des renseignements provisoires, la plupart des détaillants avaient augmenté le prix de l'essence à la fin du mois. Cette taxe, à elle seule, aurait pour effet de faire monter l'IPC d'ensemble du mois prochain de presque un demi pourcent).

Plus de la moitié de la hausse de 3.3% de l'indice des prix des aliments est attribuable à une hausse de 18% du prix moyen du boeuf, au début de juin, cette dernière ramenant le niveau des prix à celui d'un an plus tôt. Les prix du porc ont également accusé une hausse (de près de 10%) entre mai et juin, atteignant un niveau de 37% supérieur à celui d'un an plus tôt. Les produits frais, dont les prix augmentent habituellement en juin, ont enregistré des hausses de 10.4% dans le cas des légumes frais et de 6.0% dans le cas des fruits frais. Par contre, le prix du sucre a poursuivi sa baisse continue depuis la fin de l'année dernière, se repliant de 21.5% le mois dernier.

L'augmentation de 0.8% de l'indice d'ensemble (à l'exclusion des aliments) est surtout attribuable à la hausse des frais de logement, tant de propriété que de location, ainsi qu'à la hausse de prix des articles relatifs aux activités et à l'entretien du ménage y compris les prix des appareils ménagers. Ont aussi contribué à cette augmentation la hausse des frais de nettoyage et de buanderie, des tarifs de transport entre villes par avion, par train et par autobus et celle des prix de l'équipement récréatif.

Si l'on considère les mouvements des prix des biens et des services entre mai et juin, le prix des biens a augmenté de 1.8% alors que le prix des services a progressé de 1.1%.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation s'est accru de 1.4% entre mai et juin, ce qui comprend une augmentation de 3.1% de l'indice des aliments et une autre de 0.8% de l'indice d'ensemble (à l'exclusion des aliments). En juin, le taux annuel *courant* de variation de l'I.P.C. (1) basé sur le mouvement désaisonnalisé des trois derniers mois, était de 11.2%, sensiblement supérieur à celui enregistré au cours des trois mois précédents (7%) et ce, en raison surtout de la forte hausse du prix des aliments.

<b>Industrial price indexes - Indices des prix dans l'industrie:</b>							
Industry selling price index: manufacturing - 1961=100(1) - Indices des prix de vente dans l'industrie: industries manufacturières .....	190.2	190.7	169.9	168.5	- 0.3	0.8	11.9
General wholesale index - (1935-39=100)(2) - L'indice général de gros .....	483.6	485.2r	452.9r	454.4	- 0.3	- 0.3	6.8
Vegetable products - Substances végétales .....	430.5	439.7r	452.8r	465.6	- 2.1	- 2.7	- 4.9
Animal products - Produits animaux .....	546.0	535.1r	484.6r	474.9	2.0	2.0	12.7
Textile products - Produits textiles .....	399.0	400.7	427.3	426.0	- 0.4	0.3	- 16.6
Wood products - Produits du bois .....	654.3	658.5r	556.0r	563.5	- 0.6	- 1.3	17.7
Iron products - Produits du fer .....	510.4	511.9r	448.2r	445.9	- 0.3	0.5	13.9
Non-ferrous metals - Métaux non ferreux .....	413.8	416.0r	428.3r	432.8	- 0.5	- 1.0	- 3.4
Non-metallic minerals - Minéraux non métallique .....	387.2	387.2r	333.8r	327.2	-	2.0	16.0
Chemical products - Produits chimiques .....	383.9	384.6r	320.4r	308.7	- 0.2	3.8	19.8
<b>Selected Price Indicators - Certains indices des prix:</b>							
Canadian farm products - (1935-39=100)(3) - Produits agricoles canadiens .....	512.3	495.4	513.5	502.6	3.4	2.2	(3)
Eastern - Total - De l'est .....	511.7	485.2	497.6	485.0	5.5	2.6	2.8
Western - Total - De l'ouest .....	511.0	503.6r	529.6	520.1	1.5	1.8	(3)
Field - Cultures .....	404.5	388.6	470.3	467.5	4.1	0.6	(3)
Animal - Animaux .....	620.1	602.2r	556.8	537.6	3.0	3.6	11.4
Thirty industrial materials - (1935-39=100)(2) - Trente matériaux industriels .....	469.7	483.8r	489.8r	490.6	- 2.9	- 0.2	- 4.1
<b>Consumer price indexes - Canada (1961=100) - Indices des prix à la consommation:</b>							
All-items - Indice d'ensemble .....	184.0	181.3	166.7	164.6	1.5	1.3	10.4
Food - Aliments .....	213.3	206.5	188.4	186.1	3.3	1.2	13.2
Housing - Habitation .....	180.5	178.8	165.5	163.4	1.0	1.2	9.1
Clothing - Habillement .....	160.9	159.6	152.0	150.5	0.8	1.0	5.9
Transportation - Transports .....	165.3	164.2	151.2	148.4	0.7	1.9	9.3
Health and personal care - Soins personnels et hygiène .....	189.0	188.3	169.3	168.3	0.4	0.6	11.6
Recreation, education and reading - Loisirs, formation et lecture .....	174.2	172.9	156.9	154.6	0.8	1.5	11.0
Tobacco and alcohol - Tabacs et alcools .....	162.2	161.7	143.5	142.8	0.3	0.5	13.0
<b>Security price indexes - (1971=100) - Indices des cours de valeurs mobilières:</b>							
Investors index - Indice des placements .....	106.0	105.6	108.2	108.6	0.4	- 0.4	- 2.0
Industrials - Industrielles .....	109.0	108.9	113.7	114.4	0.1	- 0.6	- 4.1
Foods - Aliments .....	95.8	96.0	102.0	98.9	- 0.2	3.1	- 6.1
Alcoholic beverages - Boissons alcooliques .....	96.3	91.9	121.5	120.8	4.8	0.6	- 20.7
Textiles and clothing - Textiles et vêtements .....	128.4	121.6	165.6	159.5	5.6	3.8	- 22.5
Pulp and paper - Pâtes et papiers .....	135.8	134.8	148.4	149.1	0.7	- 0.5	- 8.5
Printing and publishing - Impression et édition .....	143.8	141.4	144.4	139.9	1.7	3.2	- 0.4
Primary metals - Métaux primaires .....	119.9	122.0	137.0	128.0	- 1.7	7.0	- 12.5
Industrial mines - Mines industrielles .....	85.4	86.5	90.5	93.6	- 1.3	- 3.3	- 5.6
Metal fabricating - Fabrication des métaux .....	152.0	155.6	157.3	151.5	- 2.3	3.8	- 3.4
Non-metallic minerals - Minéraux non métalliques .....	105.2	104.2	113.5	117.0	1.0	- 3.0	- 7.3
Petroleum - Pétrole .....	115.0	113.9	107.2	113.8	- 1.0	- 5.8	- 7.3
Chemicals - Produits chimiques .....	134.1	136.4	148.3	140.6	- 1.7	5.5	- 9.6
Construction .....	174.1	167.9	169.3	170.0	3.7	- 0.4	2.8
Trade - Commerce .....	106.8	107.9	102.6	99.0	- 1.0	3.6	4.1
Utilities and services - Services publics .....	84.0	85.0	84.0	84.6	- 1.2	- 0.7	-
Transportation - Transport .....	111.4	114.1	102.5	105.5	- 2.4	- 2.8	8.7
Pipelines - Pipe-line .....	69.5	71.3	73.1	73.9	- 2.5	- 1.1	- 4.9
Radio and TV broadcasting - Radiodiffusion et télédiffusion .....	103.8	104.2	105.8	101.6	- 0.4	4.1	- 1.9
Telephone - Téléphone .....	88.6	88.8	88.4	87.4	- 0.2	1.1	- 0.2
Electric power - Énergie électrique .....	91.8	90.9	92.9	94.1	1.0	- 1.3	- 1.2
Gas distribution - Distribution de gaz .....	67.8	67.5	70.0	71.0	0.4	- 1.4	- 3.1
Finances .....	124.7	120.0	117.5	116.0	3.9	1.3	6.1
Banks - Banques .....	130.3	125.3	122.8	122.7	4.0	0.1	6.1
Investment and loan - Placements et prêts .....	113.3	108.3	103.9	100.0	4.6	3.9	9.0
Insurance - Assurances .....	102.2	103.1	109.1	99.9	- 0.9	9.2	- 6.3
<b>Mining - Indices des titres miniers</b>	119.6	118.7	127.3	133.1	0.8	- 4.4	- 6.0
Gold - Or .....	227.1	220.4	237.5	246.3	3.0	- 3.6	- 4.4
Base metals - Métaux communs .....	68.0	70.0	74.5	78.8	- 2.9	- 5.5	- 8.7
Uranium - Uranium .....	188.4	165.6	161.6	160.4	13.8	0.7	16.6
Primary oils and gas - Pétrole et gaz primaires .....	86.4	82.0	79.7	82.6	5.4	- 3.5	8.4

- (1) Gross weighted, including inter-industry shipments. For explanation see page 92. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 92.
- (2) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1974 are subject to revision. See notes page 93 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1974 sont sujets à révision. Voir les renvois de la page 93 pour les prix détaillés des grains de l'Ouest.

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities  
TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

		1961 = 100													
Industries and selected commodities(1)		Month - Mois												Annual

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities  
TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month - Mois												Annual
	J	F	M	A	M	J	J	A	S	O	N	D	Annuel
	1971												
	1972												
	1973												
	1974												
	1975												
Industry selling price index: manufacturing(7) - Indice de prix de vente dans l'industrie: industries manufactu- rières(7).	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973 133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.9	147.7	149.0	150.4	152.9	142.7
	1974 157.4	160.1	162.7	165.7	168.5	170.1	173.1	175.9	178.0	179.7	182.6	182.7	
	1975 185.6	187.0	187.1	188.9	190.7	190.2							

- (1) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 92. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 92.
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old series -	New series -
	Ancienne série	Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certain produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 91. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 91.

(1) All indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974

et 1975 sont sujets à révision.

(2) Includes gold. - Y compris l'or.

(3) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or.

(4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros.

(5) Excludes gold. - Sauf l'or.

(6) See page 94 for additional information. - Pour des informations additionnelles voir page 94.

(7) Final to July 1974. See page 93 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. - Indices définitifs jusqu'en juillet 1974.

Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 93 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

TABLE 6. Wholesale Price Indexes of Selected Primary Commodities(1)

TABLEAU 6. Indices des prix de gros de certains produits bruts(1)

1935-39=100

Primary commodities - Produits bruts	Months - Mois				Annual averages - Moyenne annuelle		
	June 1975 Juin	May 1975 Mai	June 1974 Juin	May 1974 Mai	1974	1973	1972
Coffee, green - Café vert .....	505.5	466.5	516.9	513.6	492.6	468.0	358.1
Copper, electrolytic - Cuivre électrolytique ...	590.9	590.9	769.2	722.5	730.3	594.4	474.3
Cotton, raw - Coton brut .....	413.3	412.9	514.3	524.6	526.8	389.7	330.0
Eggs - Oeufs .....	191.1	200.7	213.5	214.1	217.7	196.1	136.2
Fruits, fresh - Fruits frais .....	271.9	281.5	303.8	310.5	284.3	263.9	223.5
Grains - Céréales .....	449.5	463.8	489.0	540.2	562.9	406.1	205.7
Hides and skins - Cuirs et peaux vertes .....	178.2	178.9	214.9	233.6	220.2	323.9	294.1
Lead, electrolytic - Plomb électrolytique .....	404.4	469.5	499.8	527.2	500.2	367.0	323.2
Livestock - Bétail .....	680.4	644.1	592.2	567.2	611.1	606.7	458.7
Onions - Oignons .....	562.8	586.0	345.7	291.2	328.7	476.7	259.8
Potatoes - Pommes de terre .....	477.0	246.9	907.2	843.4	626.7	485.9	219.1
Rubber, raw - Caoutchouc brut .....	186.4	187.0	244.7	268.0	246.8	222.7	114.0
Scrap iron and steel - Déchets de fer et d'acier	538.9	545.8	749.6	805.8	740.6	388.8	268.1
Silver - Argent .....	1149.9	1159.9	1258.4	1426.3	1180.8	663.3	430.6
Steers - Bouvillons .....	809.4	780.5	794.4	757.3	803.9	645.3	597.6
Sugar, raw - Sucre brut .....	470.9	601.9	772.3	790.6	943.5	321.0	253.9
Tin - Etain .....	697.7	707.5	900.4	882.5	764.4	435.6	338.8
Wool, raw domestic - Laine brute indigène .....	248.5	251.5	331.4	333.8	334.3	492.5	201.7
Wool, raw, imported - Laine brute importée .....	262.4	259.0	286.3	301.1	284.4	379.6	196.8
Zinc, prime, western - Zinc de première qualité, de l'Ouest .....	822.8	822.8	756.1	756.1	767.2	522.6	411.6

(1) All indexes for 1973, 1974 and 1975 are subject to revision. - Les indices pour 1973, 1974 et 1975 sont sujets à révision.

All-items Consumer Price Index converted to 1949=100, June 1975 - L'indice des prix à la consommation converti à 1949=100, juin 1975 ..... 237.7

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)

1961=100

	June 1975 Juin	May 1975 Mai	June 1974 Juin	May 1974 Mai	1974	1973	1972
All-items - Indice d'ensemble .....	184.0	181.3	166.7	164.6	166.8	150.4	139.8

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14.

No.		St. John's (Nfld)  Saint Jean (T.-N.) (1961=100)	Halifax (1961=100)	Saint John (N.B.) - Saint Jean (N.-B.) (1961=100)	Québec (1969=100)	Montréal (1961=100)	Ottawa (1961=100)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

37	June - Juin ....	189.3	162.7	158.0	130.2	173.1

- (1) Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 expenditure weights for Québec and Thunder Bay); those for May 1973 forward are based on 1967 expenditures. The revised series are linked to their predecessors at April 1973. For further explanation see page 95.
- (2) As of January 1975, the separate consumer price indexes for Saskatoon, Regina, Edmonton and Calgary supersede the combined-cities series. Users of the combined series are therefore advised to switch to the separate city indexes which are available only from April 1973. (The historical data for the combined-cities series are presented in Table 11A). Should users have any questions, contact the Retail Prices Section or consult the Retail Prices and Living Costs Service Bulletin, Catalogue 62-005, Volume 3, No. 5.
- (3) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.
- (4) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.

167.6	126.9	163.3	148.2	152.0	159.6	157.9	150.8	38

- (1) Avant mai 1973, les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957 (pour Québec et Thunder Bay sur les dépenses de 1964); à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.
- (2) A partir de janvier 1975, les indices séparés des prix à la consommation pour Saskatoon, Regina, Edmonton et Calgary remplacent les séries combinées. Nous conseillons donc aux utilisateurs des séries combinées d'utiliser les séries des indices séparés qui sont disponibles depuis avril 1973. (Les données historiques pour les séries combinées sont publiées au tableau 11A). Si il y a des questions, communiquez avec la section des prix de détail ou consultez le Bulletin de service sur les prix de détail et les coûts de la vie, no 62-005 au catalogue, volume 3, no 5.
- (3) Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.
- (4) Comprend le logement et l'entretien du ménage. Jusqu'en avril 1963, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.

## EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR PRICE SERIES

### Industrial Price Indexes

#### Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

#### Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

#### "Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

## EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES SÉRIES DE PRIX

### Indices des prix industriels

#### Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-528 au catalogue).

#### Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

#### "Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

## Purchase Price Indexes of Secondary Metals (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

## Canadian Farm Products Price Index (1935-39 = 100)

Prices for Western grains used in the index are Canadian Wheat Board buying prices for grain in store at Vancouver or Thunder Bay.

Final payments for the crop year August 1973 - July 1974 were announced on December 24, 1974 and have been incorporated into the index. Estimates for the total 1974-75 payments are based on the initial payment plus half of the 1973-74 crop year final payment.

## Indices du prix d'achat des métaux de deuxième fusion (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

## Indice des prix des produits agricoles canadiens (1935-39 = 100)

Les prix des céréales de l'Ouest utilisés dans l'indice sont les prix d'achat de la Commission canadienne du blé pour les céréales entreposées à Vancouver ou à Thunder Bay.

Les paiements finals pour la campagne agricole août 1973 - juillet 1974 ont été annoncés le 24 décembre 1974 et ont été incorporés à l'indice. Les estimations des paiements totaux de 1974-75 sont basées sur le paiement initial plus la moitié du paiement final de la campagne agricole 1973-74.

### General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue 62-501).

### Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

---

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

### Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (n° 62-501 au catalogue).

### Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

---

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

#### The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant basket" of goods and services representing the purchases by particular population group in a specified time period. The basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor would it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights and relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

#### L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (n° 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

## The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

## Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

## L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961 - avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, n° 62-005 au catalogue, vol. 2 n° 7.

## Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

### Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

### Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the time interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

### Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

### Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91  $((100.0/110.0) \times \$100)$ , which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6  $((90.91/80.00) \times 100)$ . Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages  $((\$100.00 - \$80.00 / \$80.00) \times 100)$ .

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4  $((146.23/74.45) \times 100)$ . The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98  $((146.23/142.0) \times 100)$ . (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3  $((102.98/74.45) \times 100)$ .

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be ren-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91  $((100.0/110.0) \times 100)$ , et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6  $((90.91/80.00) \times 100)$ . On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires  $((\$100.00 - \$80.00 / \$80.00) \times 100)$ .

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4  $((146.23/74.45) \times 100)$ . Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98  $((146.23/142.0) \times 100)$ . (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3  $((102.98/74.45) \times 100)$ .

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consom-

lered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

### Inter-City Retail Price Comparisons

Measurements of retail price differentials prevailing between a number of Canadian urban centres previously published to reflect inter-city comparisons as of May 1965, May 1968, May 1969 and May 1971 have been revised to February 1975.

In this new series of updatings inter-city price comparisons will be drawn for goods and services comprising most of the budget on which the Consumer Price Index for Canada is currently based.

Table 14 presents the first five components of goods and services to be updated in this series. Price indexes for additional budget elements will be published on a component-by-component basis as each stage of these results becomes available. The data base for this study was the wide range of retail price quotations collected in the course of production of the national Consumer Price Index in addition to supplementary information gathered in a special program of pricing undertaken for publication of City Average Retail Prices (1).

(1) Retail Prices and Living Costs Service Bulletin, Vol. 4, No. 2, February, 1975.

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

### Comparaisons entre les prix de détail d'une ville à l'autre

Les mesures de la disparité des prix de détail qu'on observe dans un certain nombre de centres urbains du Canada, déjà publiées afin de donner les comparaisons entre les villes aux mois de mai 1965, mai 1968, mai 1969 et mai 1971 ont été révisées en février 1975.

Les nouvelles séries de mises à jour seront faites pour la plupart des biens et services servant actuellement à établir l'indice des prix à la consommation du Canada.

On trouvera au tableau 14, les résultats de la mise à jour des cinq premières composantes. Pour ce qui est des autres éléments du budget à la consommation, on publiera des indices de prix différentiels, composante par composante, au fur et à mesure que les résultats d'enquête seront disponibles. Les données de base pour cette étude ont été constituées par l'importante collection recueillie pour la production de l'indice national des prix à la consommation en plus de l'information supplémentaire obtenue dans le cadre d'un programme spécial de relevé des prix, dont les résultats permettent de publier les prix de détail moyens par ville (1).

(1) Bulletin de Service: Prix de détail et Coût de la Vie, Vol. 4, No 2, février 1975.

As previously, to facilitate price comparability between locations, differential price measurements are derived between separate pairs of cities in geographic proximity to each other. Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names wherever possible, and also having regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, paired city indexes are initially related to a common base city and subsequently compared with a weighted average of the combined 11 cities equalling 100. This is a departure from previous such studies which were based on Winnipeg price levels equalling 100. Item price relationships are aggregated by application of the 1967 combined cities weighting diagram updated for price change to February 1975.

Further information regarding Table 14 can be obtained from: Comparative Living Costs Section, Prices Division, Statistics Canada.

#### Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Comme par le passé, afin de faciliter la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour des paires de villes géographiquement proches. À l'intérieur de chaque paire de villes, les prix ont été assortis au niveau de l'article, c'est-à-dire en s'assurant que les spécifications étaient semblables, y compris la marque lorsque cela était possible, et aussi en tenant compte de la similitude des points de vente au détail et des méthodes de vente. En utilisant la méthode de couplage, les indices couplés des villes ont d'abord été reliés à une ville de base commune, puis comparés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Ceci constitue une différence entre cette étude et les études précédentes qui posaient le niveau des prix de Winnipeg comme étant égal à 100. Les relations de prix des articles ont été regroupées en appliquant le schéma de la pondération de 1967 des villes combinées mis à jour en fonction des variations de prix observées en février 1975.

De plus amples renseignements concernant le tableau 14 peuvent être obtenus de: la Section des coûts comparatifs de la vie, Division des Prix, Statistique Canada.

#### Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004 au catalogue) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002 au catalogue).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

## Security Price Indexes

Revised security price indexes on the base 1971 = 100 were presented for the first time in the May 1975 issue of this publication. The revision constitutes changes in the composition and method of calculation of the indexes as well as a shift in the price reference base from 1961 to 1971.

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held for investment purposes. The portfolio represents stocks of Canadian companies listed on at least one Canadian exchange. The number of shares held for each issue is in proportion to the total number of shares outstanding as of January 1 of each year.

The indexes are calculated using the Laspeyres index formula. Prices for the weekly common stock indexes are the daily closing quotations from the exchange with the highest volume for each stock, averaged over the number of trading days in the particular week. For preferred stock, prices used are the monthly weighted averages of daily closing quotations in which the weights are the daily total sales. Index weighting at the group and sub-group level are based on the average yearly volume of shares traded over the period 1971 to 1974.

The stocks included in the indexes are classified according to the Standard Industrial Classification (revised 1970). Two new sub-groups have been established as part of the Investors Index: Radio and Television Broadcasting has been added to Utilities while Insurance has been added to the Finance group. The order of the sub-groups has been slightly rearranged and two sub-groups (Alcoholic Beverages and Trade) have undergone minor name changes.

For the list of stocks currently included in the indexes, see the special supplement in the May issue of Prices and Price Indexes.

## Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

## Indices des cours des valeurs mobilières

Les indices révisés des cours des valeurs mobilières sur la base 1971 = 100 ont été présentés pour la première fois dans le numéro de mai 1975 de cette publication. Cette révision comporte des changements à la composition et à la méthode de calcul des indices. Par ailleurs, la base de référence des prix 1961 a été changée en celle de 1971.

Les indices des cours des valeurs mobilières mesurent dans le temps les effets du mouvement des prix sur les valeurs d'un portefeuille d'actions achetées et détenues aux fins de placement. Ce portefeuille comprend des actions de sociétés canadiennes cotées à au moins une bourse du Canada. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation au 1er janvier de chaque année.

Les indices sont calculés d'après la formule de Laspeyres. Les prix servant au calcul des indices hebdomadaires sont les cours quotidiens de clôture pour la bourse où le volume des transactions est le plus élevé pour chaque titre. Ils sont ensuite mis en moyenne selon le nombre de jours ouvrables d'une semaine déterminée. En ce qui concerne les actions privilégiées, les prix utilisés sont les moyennes mensuelles pondérées des cours quotidiens de clôture dans lesquels les pondérations sont les ventes totales quotidiennes. Les pondérations des groupes principaux et des sous-groupes sont basées sur le volume annuel moyen de titres vendus au cours de la période 1971-1974.

Les actions faisant partie des indices sont classés selon la Classification des activités économiques de 1970. Deux nouveaux sous-groupes ont été créés en tant que partie de l'indice des cours des actions ordinaires: la radiodiffusion et la télédiffusion ont été ajoutées aux services tandis que les assurances ont été ajoutées au groupe des finances. Par ailleurs, l'ordre des sous-groupes a été modifié et le nom de deux d'entre eux (boissons alcooliques et commerce) a été changé.

Pour la liste des actions habituellement comprises dans les indices, consulter le supplément spécial dans l'édition de mai de la publication Prix et indices des prix.

## Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des question d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

## SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- . . . figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . nombres indisponibles.
- . . . n'ayant pas lieu de figurer.
- néant ou zéro.
- - nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

## NOTES ON PRICES AND PRICE INDEX NUMBERS

### Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 0.8% in July to 191.8 from the revised June index of 190.3. It was 10.8% higher than the July 1974 index of 173.1.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the foods and beverages group (1.7%) with advances in sugar refineries (15.6%) and slaughtering and meat packing (4.1%). Price increases in the melting and refining industry (1.3%) was mainly responsible for moving the primary metals group to a higher level. Within the chemical products group there were significant advances (3.5%) for manufacturers of pharmaceuticals and medicines and (2.7%) for industrial chemicals.

Declines during the month were relatively insignificant.

## NOTES SUR LES PRIX ET LES INDICES DES PRIX

### Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (ensemble des industries manufacturières) a progressé de 0.8% de juin à juillet pour passer de 190.3 (chiffre rectifié) à 191.8. Cela correspond à une augmentation de 10.8% par rapport à juillet 1974 (173.1).

En ce qui concerne l'apport relatif des groupes à la variation globale de l'indice des industries manufacturières, les variations les plus considérables ont été observées dans le groupe des aliments et boissons (1.7%) en raison des hausses dans le raffinage du sucre (15.6%), l'abattage et le conditionnement de la viande (4.1%). La hausse des prix dans le domaine de la fonte et de l'affinage (1.3%) a le plus contribué à faire monter l'indice du groupe de la première transformation des métaux. Quant aux produits chimiques, des augmentations sensibles ont été observées pour les produits pharmaceutiques et les médicaments (3.5%) et pour les produits chimiques industriels (2.7%).

Au cours du mois, les diminutions ont été relativement négligeables.

## General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 1.3% in July to 490.2 from the revised June index of 483.9. Six of the eight major groups increased and two decreased slightly.

The vegetable products group index moved up 3.4% to 445.1 from the revised June index of 430.4. This increase was due mainly to higher prices for sugar and its products 14.4%, fresh vegetables 12.6%, potatoes 10.7% and grains 7.3%. An advance of 2.8% to 561.7 from the revised June index of 546.6 in animal products group reflected upward movement in hides and skins 17.8%, eggs 11.4%, cured meats 6.5%, fresh meats 4.4%, and livestock 3.6%. Non-metallic products group increased by 1.1% from revised June index of 387.2 to 391.3 due principally to increases for cement 3.0% and petroleum and its products 2.9%. Lesser increases were noted in the non-ferrous group 0.5%, in the textile group 0.4% and in the wood products group 0.2%. Chemical and iron products (lower pig iron and scrap prices) index decreased 0.4% and 0.3% respectively.

## Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros s'est accru de 1.3%, passant de 483.9 en juin (chiffre rectifié) à 490.2 en juillet. Six des huit groupes principaux ont augmenté et deux ont diminué légèrement.

L'indice du groupe des substances végétales a progressé de 3.4% pour atteindre 445.1, contre 430.4 en juin (chiffre rectifié). Cette augmentation s'explique en grande partie par la hausse de prix du sucre et de ses dérivés (14.4%), des légumes frais (12.6%), des pommes de terre (10.7%) et des céréales (7.3%). La progression de 2.8% de l'indice des prix des produits animaux qui est passé de 546.6 en juin (chiffre rectifié) à 561.7 en juillet est attribuable à une augmentation des prix des cuirs et peaux (17.8%), des oeufs (11.4%), des viandes salées (6.5%), des viandes fraîches (4.4%) et du bétail (3.6%). L'indice du groupe des produits non métalliques s'est accru de 1.1% pour passer de 387.2 en juin (chiffre rectifié) à 391.3 en raison surtout de la hausse du prix du ciment (3.0%), du pétrole et de ses dérivés (2.9%). L'augmentation a été moins considérable pour le groupe des métaux non ferreux (0.5%), le groupe des matières textiles (0.4%) et le groupe des produits du bois (0.2%). Les indices des produits chimiques et des produits du fer (baisse des prix de la fonte en gueuse et de la ferraille) ont diminué respectivement de 0.4% et de 0.3%.

\* These indexes are preliminary. — Ces indices sont provisoires.

## **Canadian Farm Products Price Index (1935-39=100)**

The price index of Canadian farm products at terminal markets moved up 1.3% to 518.1 from the revised June index of 511.5. The animal products index increased 2.1% to 628.7 from 615.9. It reflected higher prices for eggs and hogs on both Eastern and Western markets and for calves, steers and fluid milk in the West. Lower prices were shown for lambs, cheesemilk and raw wool on both markets and for calves and steers in the East.

The field products index rose 0.1% to 407.6 from 407.1. Prices increased for potatoes on both markets and for corn in the East and rye in the West.

Lower prices were recorded for hay on both markets, for rye, wheat, oats and barley in the East and flax in the West.

## **Thirty Industrial Materials Price Index (1935-39=100)**

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.9% to 478.3 in July from the revised June index of 469.3. Prices were higher for fourteen commodities, lower for six and unchanged for ten. Principal changes included increases for raw sugar, raw rubber, domestic wheat, raw cotton, hogs, iron ore, beef hides, crude oil, spruce lumber, linseed oil, domestic lead, oats, domestic zinc and bleached sulphite pulp, while decreases were recorded for steel scrap, sisal, tin, raw wool, steers and domestic copper.

## **Farm Input Price Index Third Quarter 1975 (1961=100)**

The Farm Input Price Index for Canada (1961=100) increased 2.5% in the third quarter of 1975 to 214.1 from a second quarter revised figure of 208.9. On a regional basis, the eastern index rose 2.0% to 215.0 from a revised 210.8 and the western index rose 3.0% to 213.0 from a revised second quarter figure of 206.7.

Over the last 12 months, the Canada Index has risen 6.6%. For eastern Canada the 12 month rise has been 6.9%. The 12 month increase for the west has been 10.7%.

Higher costs of petroleum products were responsible for more than half the increase in the Farm Input Index between the second and third quarters. Higher prices for building Replacement and Building Repairs, Labour, Artificial Insemination and Custom Work also contributed to the increase.

## **Consumer Price Index**

The Consumer Price Index for Canada (1961=100) advanced 1.4% to 186.5 in July from 184.0 in June, with much of the rise being attributable to seasonal influences.

## **Inuice des prix des produits agricoles canadiens (1935-39=100)**

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 1.3%, passant de 511.5 en juin (chiffre rectifié) à 518.1 en juillet. L'indice des produits animaux a augmenté de 2.1%, passant de 615.9 à 628.7. L'augmentation provient d'une hausse du prix des oeufs et des porcs sur les marchés de l'Est et de l'Ouest, et des bovins, des bouvillons et du lait de consommation dans l'Ouest. On a observé des baisses du prix de l'agneau, du lait de fromagerie et de la laine brute sur les deux marchés, et des bouvillons et des bovins sur le marché de l'Est.

L'indice des produits de grande culture a augmenté de 0.1%, passant de 407.1 à 407.6. L'augmentation est attribuable à une hausse du prix des pommes de terre sur les deux marchés, du maïs dans l'Est et du seigle dans l'Ouest.

Les prix du foin ont baissé sur les deux marchés, ceux du seigle, du blé, de l'avoine et de l'orge sur le marché de l'Est, et celui du lin sur celui de l'Ouest.

## **Indice des prix de trente matières industrielles**

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 1.9%, passant de 469.3 en juin (chiffre rectifié) à 478.3% en juillet. Les prix ont augmenté pour quatorze marchandises, ont diminué pour six et n'ont pas varié pour dix autres. Les principales variations englobent des augmentations pour le sucre brut, le caoutchouc brut, le blé canadien, le coton brut, les porcs, le minerai de fer, les peaux de boeuf, le pétrole brut, le bois d'épinette, l'huile de lin, l'avoine, le plomb canadien, le zinc canadien et la pâte au sulphite blanchie, alors que des diminutions ont été observées pour les déchets d'acier, le sisal, l'étain, la laine brute, les bouvillons et le cuivre canadien.

## **Indice des prix des entrées dans l'agriculture, troisième trimestre de 1975 (1961=100)**

L'indice canadien des prix des entrées dans l'agriculture (1961=100) a augmenté de 2.5% au troisième trimestre de 1975, passant de 208.9 (chiffre rectifié) au deuxième trimestre à 214.1. Selon la région, l'indice de l'Est a augmenté de 2.0% passant de 210.8 (chiffre rectifié) à 215.0 et l'indice de l'Ouest a progressé de 3.0%, passant de 206.7 (chiffre rectifié) au deuxième trimestre à 213.0.

Au cours des douze derniers mois, l'indice a augmenté de 6.6% au Canada, de 6.9% dans l'Est et de 10.7% dans l'Ouest.

La hausse du prix (des produits pétroliers) est responsable de plus de la moitié de l'augmentation de l'indice des prix des entrées dans l'agriculture entre le deuxième et le troisième trimestre. La hausse des prix du remplacement et de la réparation des bâtiments, de la main-d'oeuvre, de l'insémination artificielle et du travail sur commande a également contribué à l'augmentation.

## **L'indice des prix à la consommation**

L'indice des prix à la consommation pour le Canada (1961=100) est passé de 184.0 en juin à 186.5 en juillet, soit une progression de 1.4%. Cette augmentation est principalement

Food prices, which moved up by 2.3% since the preceding month, accounted for one-half of the overall CPI increase, while the \$0.10 per gallon excise tax imposed on gasoline contributed a further one-third. The All-Items index excluding Food rose 1.0%. In the twelve-month period between July 1974 and July 1975, the total CPI advanced 11.0%.

Seasonally higher fresh produce prices, particularly for vegetables, accounted for one-half of the 2.3% increase in the Food index; a further one-quarter was attributable to higher pork prices which by the beginning of July had moved up 8.0% for the month to a level 44% above a year earlier. After increasing sharply in the preceding month, beef prices averaged only a 1.0% rise in the latest month. Egg prices also moved up. In contrast, lower prices were registered for margarine and other fats and oils, and sugar continued its downward movement. After twenty consecutive months of increase, the price of home consumed soft drinks declined slightly in the latest month.

The advance of 1.0% in the index for All-Items excluding Food was principally attributable to the excise tax on gasoline. Higher shelter prices, for both owned and rented accommodation, also contributed to this increase, as did seasonally higher charges for vacation lodging. Counteracting these upward movements to some extent, were reduced consumer prices for car purchases as a result of the elimination of the Ontario sales tax on certain new automobiles, and marginally lower clothing prices.

Viewed in terms of goods and services, the price level of goods increased 1.7% between June and July while that for services was up 0.9%.

*On a seasonally adjusted basis*, the All-Items Consumer Price Index advanced 1.0% between June and July, including a 1.2% increase in the Food index and a 0.9% rise in the index for All-Items excluding Food.

In July, the *current* annual rate of change in the CPI, based on the seasonally adjusted movement since three months earlier was 13.0%, the highest rate of increase since the latter part of 1974.

attribuable aux influences saisonnières. La hausse de 2.3% du prix des aliments a compté pour la moitié de l'augmentation globale de l'IPC, alors que la taxe d'accise de \$0.10 par gallon d'essence a compté pour un tiers de la hausse. L'indice d'ensemble, sans les aliments, a progressé de 1.0%. Pour la période de 12 mois comprise entre juillet 1974 et juillet 1975, l'I.P.C. global s'est accru de 11.0%.

La hausse saisonnière du prix des fruits, et surtout des légumes frais, a compté pour la moitié de l'augmentation de 2.3% de l'indice des aliments; un quart de celle-ci est attribuable à la majoration du prix du porc, majoration qui se chiffrait au début de juillet à 8.0% par rapport au mois précédent et à 44% par rapport à l'année précédente. Après avoir fortement augmenté le mois précédent, le prix du boeuf a enregistré une hausse moyenne de 1.0% seulement pour le mois observé. Le prix des oeufs s'est également accru. En revanche, le prix de la margarine, des autres matières grasses et des huiles a diminué, tandis que le prix du sucre poursuivait sa tendance à la baisse. Après vingt mois consécutifs d'augmentation, le prix des boissons gazeuses consommées à la maison a légèrement diminué au cours du mois observé.

La progression de 1.0% de l'indice d'ensemble, sans les aliments, est principalement imputable à la taxe d'accise sur l'essence. Ont également contribué à cette avance la hausse du prix du logement, tant pour les locataires que pour les propriétaires, et l'augmentation saisonnière des loyers des logements de villégiature. Ces tendances à la hausse ont été compensées dans une certaine mesure par une baisse du prix d'achat des automobiles en raison de l'élimination de la taxe de vente de l'Ontario sur certaines automobiles neuves et par une légère diminution du prix des vêtements.

Si l'on considère les mouvements des prix des biens et des services, le niveau des prix des biens a augmenté de 1.7% de juin à juillet, alors que celui des services s'est accru de 0.9%.

*Après désaisonnalisation*, l'indice d'ensemble des prix à la consommation a augmenté de 1.0% entre juin et juillet, ce qui comprend une augmentation de 1.2% de l'indice des aliments et une autre de 0.9% de l'indice d'ensemble (sans les aliments).

En juillet, le taux annuel *courant* de variation de l'I.P.C. basé sur le mouvement désaisonnalisé des trois derniers mois était de 13.0%, soit le taux d'augmentation le plus élevé depuis la fin de 1974.

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities

TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

Industries and selected commodities(1)					1961 = 100										Annual
Industrie et certains produits(1)					Month - Mois										Annuel
Machine and sheet metal screws and stove bolts, all metals - Vis mécaniques ou à métal et boulons à métal, tous métaux.	1971	144.2	146.8	151.7	151.7	151.7	151.7	151.7	151.7	151.7	151.7	151.7	151.7	150.7	
	1972	158.1	158.1	158.1	158.1	158.1	158.1	158.1	158.1	158.1	158.1	158.1	158.1	159.8	
	1973	168.3	168.3	173.6	173.6	173.6	173.6	173.6	173.6	173.6	173.6	173.6	173.6	159.8	
	1974	180.7	180.7	184.4	192.9	192.9	192.9	192.9	192.9	192.9	192.9	192.9	192.9	180.7	
13 3050 067	1975	192.9	200.0	207.4	207.4	209.8	209.8	209.8	209.8	209.8	209.8	209.8	209.8	175.2	
Hardware, tool and cutlery manufacturers - Manufacturiers de quincaillerie, d'outillage et de coutellerie.	1971	129.3	129.3	129.7	128.3	130.4	130.4	131.6	131.6	132.2	132.1	132.6	132.6	130.9	
	1972	135.9	135.9	135.9	135.9	135.9	137.3	137.3	137.6	137.7	138.2	138.4	138.5	137.0	
	1973	138.9	139.1	139.3	139.5	139.5	139.9	140.7	139.7	148.5	149.5	149.7	153.2	142.9	
	1974	156.2	157.4	162.2	164.5	165.9	167.5	170.0	170.9	173.3	173.5	176.1	177.8		
13 3060	1975	178.5	180.9	182.0	186.5	187.6	188.1	188.6							
Hardware builders and shelf hinges and butts - Ferronnerie, serrurerie de bâtiment et de rayonnage - charnières, gon et pentures	1971														
	1972														
	1973														
	1974														
13 3060 009	1975	176.6	179.1	179.1	183.8	183.8	174.2	174.2	174.2	174.2	174.2	174.2	179.8		
Hardware, other builders' and shelf hardware - Quincaillerie bâtiment et rayonnage.	1971	130.7	130.7	130.7	130.7	130.7	130.7	130.7	130.7	132.3	132.3	132.3	132.3	131.2

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities

TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

Industries and selected commodities(1)		1961 = 100												Month - Mois		Annual
Industrie et certains produits(1)																Annuel
Clay products manufacturers (from domestic clay) - Fabricants de produits de l'argile (domestique).	17 3511	1971	122.6	122.8	122.8	123.1	123.1	123.8	126.1	126.2	126.2	126.2	126.4	126.5	124.6	
		1972	128.5	129.2	129.1	129.3	129.2	129.3	129.4	129.8	130.1	130.1	131.7	132.6	129.9	
		1973	135.0	135.9	136.5	139.0	139.0	139.3	140.0	140.0	141.4	141.9	146.0	148.7	140.2	
		1974	154.6	156.3	157.5	161.4	160.2	164.4	167.2	167.7	168.6	169.8	170.0	172.1		
		1975	178.2	188.4	188.7	191.5	192.2	194.5	195.5							
Brick, stiff mud (wire cut) process, face - Brique, procédé pâte ferme, de parement.	17 3511 011	1971	123.0	123.0	123.0	123.2	123.2	123.2	126.0	126.0	126.0	126.0	126.0	126.0	124.6	
		1972	128.5	128.9	128.9	128.9	128.9	128.9	129.4	129.4	129.4	129.4	132.3	133.1	129.6	
		1973	135.8	135.8	135.8	135.8	135.8	135.8	136.9	136.9	137.6	138.8	144.5	146.1	138.0	
		1974	152.4	152.4	153.6	157.9	155.7	158.6	160.6	160.6	161.6	161.4	161.7	163.6		
		1975	170.3	184.2	184.9	184.9	185.1	186.7	188.3							
Brick, dry press, face - Brique, procédé à sec de parement.	17 3511 013	1971	109.6	109.6	109.6	109.6	109.6	109.6	109.5	109.1	109.2	108.8	108.8	108.5	109.3	
		1972	109.6	109.6	109.6	109.3	109.0	108.4	108.7	108.7	110.8	110.8	110.9	111.4	109.7	
		1973	113.9	113.5	113.7	113.8	113.9	113.8	114.1	114.1	114.3	113.9	117.2	117.3	114.4	
		1974	116.9	120.1	123.7	123.6	123.2	125.2	129.1	129.2	129.7	137.1	137.4	137.4		
		1975	137.8	152.8	152.3	152.9	157.9	157.5	157.7							
Structural tile, hollow blocks (incl. fireproofing and load-bearing tile) - Tuile de construction, blocs creux (y compris murs de refend et coupe-feu).	17 3511 018	1971	133.7	136.1	136.1	137.1	137.1	137.1	145.5	145.5	145.5	145.5	145.5	145.5	140.8	
		1972	149.4	149.4	149.4	149.4	149.4	149.4	150.9	150.9	150.9	150.9	150.9	150.9	150.0	
		1973	153.8	158.8	158.8	158.8	158.8	158.8	158.8	158.8	158.8	161.3	161.3	158.8		
		1974	179.8	179.8	179.8	186.2	186.2	186.2	196.1	196.1	199.3	199.3	199.3	199.3		
		1975	216.5	216.5	216.5	222.1	222.1	238.7	238.7							
Drain tile - Tuyaux à drainage	17 3511 022	1971	129.3	129.3	129.3	129.3	129.3	135.3	135.3	136.5	136.5	136.5	138.5	138.5	133.6	
		1972	139.6	139.6	139.6	140.7	140.7	140.7	140.7	140.7	140.7	140.7	140.7	140.7	140.4	
		1973	140.8	140.5	145.7	145.7	145.7	148.2	148.2	148.2	155.7	155.7	155.7	166.6	149.7	
		1974	172.3	172.3	172.3	180.7	180.7	180.7	194.4	196.6	196.6	198.7	198.7	201.9		
		1975	201.9	201.9	201.9	216.6	216.6	216.6	216.6							
Sewer pipe - Tuyaux d'égouts	17 3511 023	1971	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	121.7	120.2	
		1972	121.7	125.9	125.9	125.9	125.9	128.1	128.1	128.1	128.1	128.1	128.1	128.1	126.8	
		1973	134.7	140.5	140.5	165.9	165.9	165.9	165.9	165.9	165.9	165.9	167.8	173.2	158.8	
		1974	173.2	186.9	186.9	186.9	186.9	193.1	193.1	198.5	198.5	198.5	198.5	205.9		
		1975	214.0	219.0	219.0	222.2	222.2	222.2	222.2							
Clay products manufacturers (from imported clay) - Fabricants de produits de l'argile (importée).	17 3512	1971	120.2	119.9	120.7	120.9	121.2	120.7	121.9	122.3	121.4	121.5	122.0	122.0	121.2	
		1972	123.0	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.9	124.5	
		1973	124.9	127.3	127.4	127.5	126.6	128.6	131.2	131.2	131.2	131.2	133.5	134.4	129.6	
		1974	142.1	142.4	142.8	146.0	146.3	148.2	159.9	162.7	162.7	162.7	162.7	162.7		
		1975	175.4	177.0	176.6	177.0	177.2	182.5	183.4							
Tile, glazed, wall - Carreaux vitrifiés, de revêtement mural.	17 3512 016	1971	98.7	97.3	100.7	101.4	102.8	100.7	102.8	102.1	98.0	98.7	100.7	100.7	100.4	
		1972	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	
		1973	100.1	100.6	98.4	99.1	98.8	99.1	103.3	103.7	103.7	103.5	105.7	107.5	102.0	
		1974	107.8	108.2	107.6	113.5	114.7	114.7	115.9	115.9	115.9	115.9	115.9	115.9		
		1975	116.5	123.2	121.7	121.7	122.4	122.4	124.4							
Glass manufacturers - Fabricants de verre	17 3561	1971	128.0	128.0	128.0	129.1	129.1	129.1	129.1	129.1	134.6	134.6	134.6	134.6	130.6	
		1972	137.4	137.4	137.4	137.5	138.0	138.3	138.1	137.8	138.0	143.5	143.5	143.3	139.7	
		1973	143.3	143.3	143.6	145.0	144.8	144.8	144.8	145.3	147.4	147.7	147.9	147.8	145.5	
		1974	152.5	157.2	157.4	157.8	157.7	157.9	171.2	171.3	171.1	171.8	171.8	171.8		
		1975	179.9	187.1	187.2	186.2	186.1	186.3	185.2							
Abrasive manufacturers - Fabricants d'abrasifs	17 3570	1971	110.9	110.5	110.4	110.4	111.0	112.1	111.9	111.2	111.3	110.6	110.6	110.1	110.9

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities  
TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

1961 = 100

Industries and selected commodities(1)	Month - Mois												Annual	
Industrie et certains produits(1)													Annuel	
	1971													
	1972													
	1973													
	1974													
	1975													
Industry selling price index, manufacturing(7) - Indice de prix de vente dans l'industrie, industries manu- facturières(7)	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973	133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.9	147.7	149.0	150.4	152.9	142.7
	1974	157.4	160.1	162.7	165.7	168.5	170.1	173.1	175.9	178.0	179.7	182.6	182.7	
	1975	185.6	187.0	187.1	188.9	190.7	190.2	191.8						

- (1) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 92. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 92.
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old series - Ancienne série	New series Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 91. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 91.

(1) All indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.

(2) Includes gold. - Y compris l'or.

(3) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or.

(4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros.

(5) Excludes gold. - Sauf l'or.

(6) See page 94 for additional information. - Pour des informations additionnelles voir page 94.

(7) Final to July 1974. See page 93 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. - Indices définitifs jusqu'en juillet 1974. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 93 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

TABLE 6. Wholesale Price Indexes of Selected Primary Commodities(1)

TABLEAU 6. Indices des prix de gros de certains produits bruts(1)

1935-39=100

Primary commodities Produits bruts	Months - Mois				Annual averages Moyenne annuelle		
	July 1975 Juill.	June 1975 Juin	July 1974 Juill.	June 1974 Juin	1974	1973	1972
Coffee, green - Café vert .....	467.8	505.5	497.4	516.9	492.6	468.0	358.1

All-items Consumer Price Index converted to 1949=100, July 1975 - L'indice des prix à la consommation converti à 1949=100, juillet 1975 ..... 241.0

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

37	Dec. ....										

- (1) Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 expenditure weights for Québec and Thunder Bay); those for May 1973 forward are based on 1967 expenditures. The revised series are linked to their predecessors at April 1973. For further explanation see page 95.
- (2) As of January 1975, the separate consumer price indexes for Saskatoon, Regina, Edmonton and Calgary supersede the combined-cities series. Users of the combined series are therefore advised to switch to the separate city indexes which are available only from April 1973. Should users have any questions, contact the Consumer Prices Section or consult the Retail Prices and Living Costs Service Bulletin, Catalogue 62-005, Volume 3, No. 5.
- (3) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.
- (4) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.

- (1) Avant mai 1973, les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957 (pour Québec et Thunder Bay sur les dépenses de 1964); à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.
- (2) A partir de janvier 1975, les indices séparés des prix à la consommation pour Saskatoon, Regina, Edmonton et Calgary remplacent les séries combinées. Nous conseillons donc aux utilisateurs des séries combinées d'utiliser les séries des indices séparés qui sont disponibles depuis avril 1973. Si il y a des questions, communiquez avec la section des prix aux consommateurs ou consultez le Bulletin de service sur les prix de détail et les coûts de la vie, no 62-005 au catalogue, volume 3, no 5.
- (3) Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.
- (4) Comprend le logement et l'entretien du ménage. Jusqu'en avril 1963, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.

## EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR PRICE SERIES

### Industrial Price Indexes

#### Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

#### Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

#### "Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

## EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES SÉRIES DE PRIX

### Indices des prix industriels

#### Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-528 au catalogue).

#### Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

#### "Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

# **Purchase Price Indexes of Secondary Metals** (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

## **Canadian Farm Products Price Index** (1935-39 = 100)

Prices for Western grains used in the index are Canadian Wheat Board buying prices for grain in store at Vancouver or Thunder Bay.

Final payments for the crop year August 1973 - July 1974 were announced on December 24, 1974 and have been incorporated into the index. Estimates for the total 1974-75 payments are based on the initial payment plus half of the 1973-74 crop year final payment.

# **Indices du prix d'achat des métaux de deuxième fusion** (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

## **Indice des prix des produits agricoles canadiens** (1935-39 = 100)

Les prix des céréales de l'Ouest utilisés dans l'indice sont les prix d'achat de la Commission canadienne du blé pour les céréales entreposées à Vancouver ou à Thunder Bay.

Les paiements finals pour la campagne agricole août 1973 - juillet 1974 ont été annoncés le 24 décembre 1974 et ont été incorporés à l'indice. Les estimations des paiements totaux de 1974-75 sont basées sur le paiement initial plus la moitié du paiement final de la campagne agricole 1973-74.

### General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue 62-501).

### Thirty Industrial Materials, (1935-39=100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}$$

$$\sqrt[30]{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}$$

### Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (n° 62-501 au catalogue).

### Indice des prix de trente matières industrielles (1935-39=100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}$$

$$\sqrt[30]{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

#### The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor would it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights and relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

#### L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (n° 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

## The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

## Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

## L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961 - avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, n° 62-005 au catalogue, vol. 2 n° 7.

## Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

### Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the age group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, employment insurance premiums and certain other security payments.

### Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110. Because of the 10% rise in consumer prices, \$1.00 will buy as much in week B as it would in week A. On the

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

### Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

### Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de

other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91  $((100.0/110.0) \times \$100)$ , which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6  $((90.91/80.00) \times 100)$ . Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages  $((\$100.00 - \$80.00 / \$80.00) \times 100)$ .

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4  $((146.23/74.45) \times 100)$ . The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98  $((146.23/142.0) \times 100)$ . (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3  $((102.98/74.45) \times 100)$ .

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be ren-

la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91  $((100.0/110.0) \times 100)$ , et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6  $((90.91/80.00) \times 100)$ . On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires  $((\$100.00 - \$80.00 / \$80.00) \times 100)$ .

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4  $((146.23/74.45) \times 100)$ . Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98  $((146.23/142.0) \times 100)$ . (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3  $((102.98/74.45) \times 100)$ .

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consom-

ered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

### Inter-City Retail Price Comparisons

Measurements of retail price differentials prevailing between a number of Canadian urban centres previously published to reflect inter-city comparisons as of May 1965, May 1968, May 1969 and May 1971 have been revised to February 1975.

In this new series of updatings inter-city price comparisons will be drawn for goods and services comprising most of the budget on which the Consumer Price Index for Canada is currently based.

Table 14 presents the first five components of goods and services to be updated in this series. Price indexes for additional budget elements will be published on a component-by-component basis as each stage of these results becomes available. The data base for this study was the wide range of retail price quotations collected in the course of production of the national Consumer Price Index in addition to supplementary information gathered in a special program of pricing undertaken for publication of City Average Retail Prices (1).

(1) Retail Prices and Living Costs Service Bulletin, Vol. 4, No. 2, February, 1975.

mation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

### Comparaisons entre les prix de détail d'une ville à l'autre

Les mesures de la disparité des prix de détail qu'on observe dans un certain nombre de centres urbains du Canada, déjà publiées afin de donner les comparaisons entre les villes aux mois de mai 1965, mai 1968, mai 1969 et mai 1971 ont été révisées en février 1975.

Les nouvelles séries de mises à jour seront faites pour la plupart des biens et services servant actuellement à établir l'indice des prix à la consommation du Canada.

On trouvera au tableau 14, les résultats de la mise à jour des cinq premières composantes. Pour ce qui est des autres éléments du budget à la consommation, on publiera des indices de prix différentiels, composante par composante, au fur et à mesure que les résultats d'enquête seront disponibles. Les données de base pour cette étude ont été constituées par l'importante collection recueillie pour la production de l'indice national des prix à la consommation en plus de l'information supplémentaire obtenue dans le cadre d'un programme spécial de relevé des prix, dont les résultats permettent de publier les prix de détail moyens par ville (1).

(1) Bulletin de Service; Prix de détail et Coût de la Vie, Vol. 4, No. 2, février 1975.

As previously, to facilitate price comparability between locations, differential price measurements are derived between separate pairs of cities in geographic proximity to each other. Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names wherever possible, and also having regard for comparability of retail outlets and merchandising practices. By means of a linking procedure, paired city indexes are initially related to a common base city and subsequently compared with a weighted average of the combined 11 cities equalling 100. This is a departure from previous such studies which were based on Winnipeg price levels equalling 100. Item price relationships are aggregated by application of the 1967 combined cities weighting diagram updated for price change to February 1975.

Further information regarding Table 14 can be obtained from: Comparative Living Costs Section, Prices Division, Statistics Canada.

#### Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Comme par le passé, afin de faciliter la comparaison de prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour des paires de villes géographiquement proches. À l'intérieur de chaque paire de villes, les prix ont été assortis au niveau de l'article, c'est-à-dire en s'assurant que les spécifications étaient semblables, y compris la marque lorsque cela était possible, et aussi en tenant compte de la similitude de points de vente au détail et des méthodes de vente. En utilisant la méthode de couplage, les indices couplés des villes ont d'abord été reliés à une ville de base commune, puis comparés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Ceci constitue une différence entre cette étude et les études précédentes, qui posaient le niveau des prix de Winnipeg comme étant égal à 100. Les relations de prix des articles ont été regroupées et appliquant le schéma de la pondération de 1967 des villes combinées mis à jour en fonction des variations de prix observées en février 1975.

De plus amples renseignements concernant le tableau 14 peuvent être obtenus de: la Section des coûts comparatifs de la vie, Division des Prix, Statistique Canada.

#### Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004 au catalogue) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002 au catalogue).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

## Security Price Indexes

Revised security price indexes on the base 1971 = 100 were presented for the first time in the May 1975 issue of this publication. The revision constitutes changes in the composition and method of calculation of the indexes as well as a shift in the price reference base from 1961 to 1971.

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held for investment purposes. The portfolio represents stocks of Canadian companies listed on at least one Canadian exchange. The number of shares held for each issue is in proportion to the total number of shares outstanding as of January 1 of each year.

The indexes are calculated using the Laspeyres index formula. Prices for the weekly common stock indexes are the daily closing quotations from the exchange with the highest volume for each stock, averaged over the number of trading days in the particular week. For preferred stock, prices used are the monthly weighted averages of daily closing quotations in which the weights are the daily total sales. Index weighting at the group and sub-group level are based on the average yearly volume of shares traded over the period 1971-1974.

The stocks included in the indexes are classified according to the Standard Industrial Classification (revised 1970). Two new sub-groups have been established as part of the Investors Index: Radio and Television Broadcasting has been added to Utilities while Insurance has been added to the Finance group. The order of the sub-groups has been slightly rearranged and two sub-groups (Alcoholic Beverages and Trade) have undergone minor name changes.

For the list of stocks currently included in the indexes, see the special supplement in the May issue of Prices and Price Indexes.

## Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

## Indices des cours des valeurs mobilières

Les indices révisés des cours des valeurs mobilières sur la base 1971 = 100 ont été présentés pour la première fois dans le numéro de mai 1975 de cette publication. Cette révision comporte des changements à la composition et à la méthode de calcul des indices. Par ailleurs, la base de référence des prix 1961 a été changée en celle de 1971.

Les indices des cours des valeurs mobilières mesurent dans le temps les effets du mouvement des prix sur les valeurs d'un portefeuille d'actions achetées et détenues aux fins de placement. Ce portefeuille comprend des actions de sociétés canadiennes cotées à au moins une bourse du Canada. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation au 1er janvier de chaque année.

Les indices sont calculés d'après la formule de Laspeyres. Les prix servant au calcul des indices hebdomadaires sont les cours quotidiens de clôture pour la bourse où le volume des transactions est le plus élevé pour chaque titre. Ils sont ensuite mis en moyenne selon le nombre de jours ouvrables d'une semaine déterminée. En ce qui concerne les actions privilégiées, les prix utilisés sont les moyennes mensuelles pondérées des cours quotidiens de clôture dans lesquels les pondérations sont les ventes totales quotidiennes. Les pondérations des groupes principaux et des sous-groupes sont basées sur le volume annuel moyen de titres vendus au cours de la période 1971-1974.

Les actions faisant partie des indices sont classés selon la Classification des activités économiques de 1970. Deux nouveaux sous-groupes ont été créés en tant que partie de l'indice des cours des actions ordinaires: la radiodiffusion et la télédiffusion ont été ajoutées aux services tandis que les assurances ont été ajoutées au groupe des finances. Par ailleurs, l'ordre des sous-groupes a été modifié et le nom de deux d'entre eux (boissons alcooliques et commerce) a été changé.

Pour la liste des actions habituellement comprises dans les indices, consulter le supplément spécial dans l'édition de mai de la publication Prix et indices des prix.

## Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

AOÛT 1975

## NOTICE TO USERS OF INDUSTRIAL SELLING PRICE INDEXES

## AVIS AUX UTILISATEURS DES INDICES DES PRIX DE VENTE DANS L'INDUSTRIE

Prices Division is introducing a major revision of the Industry Selling Price Indexes, moving the time and weight bases from 1961=100 to 1971=100. The most notable features are:

- (1) the introduction of 1971 time and weight bases;
- (2) a switch to the 1970 Standard Industrial Classification;
- (3) an increase in the number of industries and commodities covered;
- (4) better price samples for continuing series;
- (5) where feasible, establishment of weighting to take into account the relative importance of each company's shipments in 1971.

The revised series supersedes those previously published and are the official Industry Selling Price Indexes of Manufacturing as of October, 1975. Indexes from 1971 forward reflect the relative importance of commodities sold by Canadian Industries in 1971. Previously published indexes for the period prior to 1971 are arithmetically converted to a 1971=100 base and will appear in the reference paper soon to be published. Link factors taken at December 1974 will be provided for those users who wish to continue 1961=100 series, however, it must be recognized that the movement from December 1974 could reflect the revised set of weights derived from the 1971 shipment values.

The 1971=100 series adopts the Cansim Canadian Socio-Econometric Information Management System) numbering system. This new method of identification will facilitate reference to the computer data base. The old numbering system was a combination of SIC and Census of Industry line numbers. A second numbering system, incorporating these

La Division des prix a effectué une importante révision des indices des prix de vente dans l'industrie en portant l'année de référence et les bases de pondération des prix de 1961 à 1971. Les modifications les plus importantes sont les suivantes:

- 1) conversion de l'année de référence et des bases de pondération des prix sur la base 1971=100.
- 2) conversion à la Classification des activités économiques de 1970;
- 3) augmentation du nombre d'industries et de services faisant partie de l'univers;
- 4) meilleurs échantillons de prix pour les séries de continuité;
- 5) lorsque cela s'est avéré possible, les données de chaque entreprise ont été pondérées de façon à tenir compte de l'importance relative de leurs livraisons en 1971.

Les séries révisées remplacent celles déjà publiées et constituent à partir d'octobre 1975 les nouveaux indices des prix de vente dans les industries manufacturières. Les indices pour la période commençant en 1971 font état de l'importance relative des produits vendus par les industries canadiennes en 1971. Les autres indices publiés antérieurement pour les années avant 1971 sont en voie d'être convertis arithmétiquement à l'année de référence 1971 et paraîtront sous peu dans un document de référence. Des facteurs de raccordement pris en décembre 1974 seront fournis aux utilisateurs qui désireront continuer à se servir des séries 1961=100. Cependant, ces derniers doivent prendre note que le mouvement à partir de décembre 1974 reflètera l'ensemble des pondérations révisées provenant de la valeur des livraisons de 1971.

Les séries 1971=100 reposent sur le système numérique de CANSIM (Système canadien d'information socio-économique). Cette nouvelle méthode d'identification permettra une meilleure référence à la base de données informatiques. L'ancien système numérique était une combinaison de la C.A.E. et des numéros de ligne du recensement de l'industrie. Un deuxième système numérique sera également

latter (1970 SIC and 1971 line numbers) and the Industrial Commodity Classification, will also be used. A reconciliation between the old ISPI, new Cansim and ICC identifiers is available on request.

Since the indexes from 1971 forward are calculated on a new weighting pattern, they may differ from the index series on the 1961 weights. For those using the 1961=100 based indexes in contract escalation clauses, in most cases the price series presently used in the contract can be moved on the basis of the directly comparable revised price index on the 1971=100 base. It is recommended that users accept the new official time and weight base as soon as possible. Where price index series have been discontinued because of a sharp decrease in shipment value since 1961 or classification changes of an extensive nature, substitutes would have to be found. On a positive note, because of the current revision the number of manufacturing industries, as defined by the Standard Industrial Classification, having indexes calculated has expanded from approximately 100 since the previous revision to 125 now, thereby giving a wider index selection to users for contract escalation purposes. Assistance from the Industrial Prices Section of the Prices Division may be obtained to identify the most reliable substitute price index.

The reference paper mentioned earlier will be primarily an up-date of Catalogue No. 62-528 which is still valid for the underlying concepts of the Industry Selling Price Indexes. The principal changes to the previous reference paper will be to the tables and graphs.

utilisé. Il s'agit d'une combinaison du premier système (C.A.E. de 1970 et numéros de ligne de 1971) et de la Classification des produits industriels. Les utilisateurs pourront se procurer un rapprochement des anciens indices et des identifiants de CANSIM et de la C.P.I.

Comme les indices pour la période à compter de 1971 sont calculés d'après un nouveau schéma de pondération, ils peuvent différer des séries d'indices reposant sur les pondérations de 1961. Les utilisateurs se servant des indices basés sur 1961 dans des clauses d'indexation de contrats doivent prendre note que dans la plupart des cas, les séries de prix utilisées actuellement dans les contrats peuvent être transposées directement sur la base 1971=100. Par ailleurs, on recommande aux utilisateurs d'adopter le plus tôt possible la nouvelle année de référence et les nouvelles pondérations. Lorsque les séries d'indices ont été interrompues en raison d'une forte diminution de la valeur des livraisons depuis 1961 ou à cause d'importante modification de la classification, les utilisateurs devront se servir de substituts. Toutefois, en raison de la révision actuelle, le nombre d'industries manufacturières, selon la définition de la Classification des activités économiques est passé de 100 à 125, ce qui donne aux utilisateurs un plus grand choix d'indices pour l'indexation des contrats. Les utilisateurs pourront obtenir l'aide de la Section des prix industriels de la Division des prix pour déterminer les indices de prix substituts les plus fiables.

Le document de référence déjà mentionné sera en grande partie une mise à jour de la publication no 62-528 au catalogue qui demeure la source de référence pour les concepts sous-jacents aux indices des prix des ventes dans l'industrie. Les changements les plus importants dans cette publication seront apportés aux tableaux et aux graphiques.

## NOTES ON PRICES AND PRICE INDEX NUMBERS

### Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) rose 0.8% in August to 193.6 from the revised July index of 192.0. It was 10.1% higher than the August 1974 index of 175.9.

In terms of the relative contributions to the overall change in the total manufacturing index, the more notable changes were increases recorded in the foods and beverages group (1.5%) with advances in sugar refineries (19.2%), feed manufacturers (2.8%) and poultry processors (4.6%). Price increases in the petroleum refining industry (5.0%) was mainly responsible for moving the petroleum group to a higher level. Within the primary metals group there was an advance of (0.2%) for steel pipe and tube mills.

Declines during the month were relatively insignificant.

## NOTES SUR LES PRIX ET LES NOMBRES INDICES DES PRIX

### Indice des prix de vente dans l'industrie: industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie (pour toutes les industries manufacturières) a augmenté de 0.8% pour passer de 192.0 en juillet (chiffre rectifié) à 193.6 en août. L'indice était de 10.1% supérieur à celui d'août 1974 (175.9).

En termes de contribution proportionnelle à la hausse générale de l'indice de toutes les industries manufacturières, on a enregistré les augmentations les plus sensibles dans le groupe des aliments et des boissons; ce secteur a augmenté de 1.5% par suite de hausses dans les raffineries de sucre (19.2%), dans la fabrication d'aliments pour animaux (2.8%) et dans le conditionnement de la volaille (4.6%). L'augmentation qu'a connu le secteur pétrolier est en grande partie attribuable à la hausse des prix dans les raffineries de pétrole (5.0%). En ce qui concerne le groupe des métaux primaires, on a enregistré une progression de 0.2% dans la fabrication de tubes et de tuyaux d'acier.

Les baisses enregistrées ce mois-ci n'ont guère été sensibles.

## General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 1.9% to 499.4 in August from the revised July index of 490.2. It was 6.1% higher than a year earlier. Six of the eight major groups increased while two decreased.

The vegetable products group index rose 8.4% in August to 482.5 from the revised July index of 445.2 due to higher prices recorded for potatoes 29.8%, tea, coffee and cocoa 23.8%, sugar and its products 20.9%, grains 10.2% and vegetable oil products 10.0%. The non-metallic minerals group index increased 1.2% to 395.8 from the revised July index of 391.2 with increases in asphalt 17.3%, coal tar 6.1%, and petroleum and its products 2.3%. The chemical products group index increased 0.8% mainly due to increases in explosives 5.8% and soap and detergents 2.2%. The wood products group index showed an increase of 0.7% due to a rise in the price of fir 1.7%, newsprint and wrapping paper 0.9%, cedar 0.8% and woodpulp 0.8%. The non-ferrous metals group index increased 0.6% due to increases in silver 3.6%, and lead and its products 3.0%. The iron products group index rose 0.2% mainly due to an increase in scrap iron and steel 2.0%.

The animal products group index decreased 0.8% to 558.5 in August from the revised July index of 562.9 due to decreases in furs 17.2%, livestock 4.8% and fresh meats 1.3%. The textile products group index declined 0.7% due to decreases in miscellaneous fibre products 7.7%, worsted and wool cloth 1.6% and imported raw wool 0.9%.

## Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est passé de 490.2 en juillet (chiffre rectifié) à 499.4 en août, soit une augmentation de 1.9%. L'indice était de 6.1% supérieur à celui d'août de l'année précédente. On a enregistré des hausses dans six des huit groupes et des baisses dans les deux autres groupes.

L'indice du groupe des produits d'origine végétale a augmenté de 8.4% pour passer de 445.2 en juillet (chiffre rectifié) à 482.5 en août à la suite de l'augmentation des pommes de terre (29.8%), du thé, du café et du cacao (23.8%), du sucre et de ses produits (20.9%), des céréales (10.2%) et des dérivés d'huile végétale (10.0%). L'indice des minéraux non métalliques est passé de 391.2 en juillet (chiffre rectifié) à 395.8 en août; ce groupe a augmenté de 1.2% à la suite de la hausse du prix de l'asphalte (17.3%), du goudron de braie (6.1%) et du pétrole et de ses dérivés (2.3%). On a enregistré une augmentation de 0.8% de l'indice de produits chimiques en grande partie attribuable à la hausse du prix des explosifs (5.8%), du savon et des détergents (2.2%). L'augmentation de 0.7% de l'indice du groupe des produits du bois est imputable à la hausse du prix du sapin (1.7%), du papier journal et du papier d'emballage (0.9%), du cèdre (0.8%) et de la pâte de bois (0.8%). L'indice du groupe des métaux non ferreux est monté de 0.6% en raison de l'augmentation de l'argent (3.6%) et du plomb et de ses produits. L'indice du groupe des produits du fer a augmenté de 0.2% suite surtout à la hausse de 2.0% des déchets de fer et d'acier.

L'indice du groupe des produits d'origine animale a diminué de 0.8%, pour passer de 562.9 en juillet (chiffre rectifié) à 558.5 en août. Cette baisse est attribuable à la diminution du prix des fourrures (17.2%), du bétail (4.8%) et des viandes fraîches (1.3%). La baisse de 0.7% de l'indice du groupe des produits de textile est imputable à la diminution du prix des textiles divers (7.7%), de la laine peignée et des lainages (1.6%) et de la laine brute importée (0.9%).

\* These indexes are preliminary. — Ces indices sont provisoires.

## Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 0.9% to 513.2 in August from the July index of 518.1. A decrease of 3.1% to 609.4 from the revised index of 628.7 in the animal products index reflected lower prices for lambs and steers on both Eastern and Western markets, and for calves in the West. Higher prices were shown for eggs and hogs on both markets, for poultry in the East, and for raw wool and fluid milk in the West.

The field products index advanced 2.3% to 416.9 from 407.6 due to higher prices for rye on both markets, for potatoes, corn and oats in the East and for flax and hay in the West. Price decreases were shown for barley and hay in the East, and for potatoes in the West.

## Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.8% to 91.1 in August from the revised July index of 482.6. Prices were higher for thirteen commodities, lower for three and unchanged for fourteen. Principal changes included increases for raw sugar, cottonseed oil, oats, domestic wheat, raw wool, hogs, tin, raw cotton, bleached sulphite pulp, iron ore, linseed oil, raw rubber and crude oil while decreases were recorded for beef hides, steers and spruce lumber.

## The Consumer Price Index

The All-Items Consumer Price Index (1971=100) for Canada advanced 1.0% to 141.2 in August from 139.8 in July. Food prices, which likewise moved up 1.0% accounted for nearly thirty per cent of the increase; higher prices for shelter and transportation each contributed and additional one-quarter. The All-Items excluding Food index rose 0.9%. Between August 1974 and August 1975, the total CPI registered an advance of 11.1%.

Over one-half of the one per cent rise in the Food index was attributable to higher pork quotations which, on average at the beginning of August, were up 6.9% over the previous month and 41% above their level of one year earlier. Higher egg prices and increased charges for food consumed away from home also contributed significantly to this advance. After declining in the preceding eight months, sugar prices moved up 19.6%. In contrast, seasonally lower quotations for fresh vegetables, down 12.0%, and the continued downward movement of prices for margarine and other fats and oils partially offset these increases.

The rise of 0.9% in the index for All-Items excluding Food was in great part attributable to higher shelter costs for both owned and rented accommodation, as well as generally

## Indice des prix des produits agricoles (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a fléchi de 0.9%, passant de 518.1 en juillet à 513.2 en août. La diminution de 3.1% de l'indice des produits d'origine animale qui est passé de 628.7 en juillet (chiffre rectifié) à 609.4 en août est attribuable à la baisse du prix des agneaux et des bouvillons sur les marchés de l'Est et de l'Ouest, et des veaux dans l'Ouest. On a enregistré une hausse du prix des oeufs et des porcs sur les deux marchés, de la volaille dans l'Est, et de la laine brute et du lait naturel dans l'Ouest.

L'indice des produits de grande culture a progressé de 2.3%, passant de 407.6 à 416.9, par suite de l'augmentation du prix du seigle sur les deux marchés, des pommes de terre, du maïs et de l'avoine dans l'Est, et du lin et du foin dans l'Ouest. On a enregistré des diminutions de prix pour l'orge et le foin dans l'Est et les pommes de terre dans l'Ouest.

## Indice des trente matières industrielles (1935-39=100)

L'indice des prix des trente matières industrielles, calculé comme moyenne géométrique non pondérée, a augmenté de 1.8% pour passer de 482.6 en juillet (chiffre rectifié) à 491.1 en août. On a enregistré des hausses de prix pour treize marchandises, des baisses pour trois tandis que les prix de quatorze autres n'ont pas changé. Les principales variations ont été les augmentations observées pour le sucre brut, l'huile de coton, l'avoine, le blé canadien, la laine brute, les porcs, l'étain, le coton brut, la pâte de bois blanchie au sulphite, le minerai de fer, l'huile de lin, le caoutchouc et le pétrole bruts ainsi que les baisses de prix des peaux de boeuf, des bouvillons et des sciages d'épinette.

## L'indice des prix à la consommation

L'indice d'ensemble des prix à la consommation pour le Canada (1971=100) a augmenté de 1.0%, passant de 139.8 en juillet à 141.2 en août. Les prix des aliments, qui ont eux aussi progressé de 1.0%, ont compté pour près de 30% de l'augmentation; la hausse des coûts de logement et celle des transports a représenté dans chaque cas un autre quart de l'augmentation globale. L'indice d'ensemble (sans les aliments) a augmenté de 0.9%. Entre août 1974 et août 1975, l'indice total des prix à la consommation s'est accru de 11.1%.

Plus de la moitié de la hausse de 1% de l'indice des aliments est attribuable à la hausse des prix du porc, qui étaient en moyenne au début d'août supérieurs de 6.9% à ceux du mois précédent et de 41% à leur niveau de l'année précédente. La hausse du prix des oeufs et celle des repas pris à l'extérieur ont également joué un rôle appréciable. Après avoir baissé au cours des huit mois précédents, le prix du sucre a progressé de 19.6%. Par contre la diminution saisonnière du prix des légumes frais (-12.0%) ainsi que la tendance persistante à la baisse du prix de la margarine et des autres matières grasses et des huiles ont compensé une partie de ces augmentations.

La hausse de 0.9% de l'indice d'ensemble (sans les aliments) est surtout attribuable à la hausse des coûts de logement, tant les frais de loyers que les frais de propriété, ainsi qu'au

increased premiums for automobile and household insurance. Higher gasoline prices in certain provinces also contributed to this increase as did increased charges for haircuts. Clothing prices, as has been the case since earlier this year, exhibited little overall movement in the latest month.

Viewed in terms of goods and services, the price level of goods increased 0.7% while those for services rose 1.7% between July and August.

On a seasonally adjusted basis, the All-Items Consumer Price Index advanced 0.9% between July and August including a 0.7% increase in the Food index and a 0.9% rise in the index for All-Items excluding Food.

In August, the *current* annual rate of change in the CPI, based on the seasonally adjusted movement since three months earlier was 13.9%, a rate similar to that experienced in the latter part of 1974.

#### Note to CPI Users

In keeping with the Statistics Canada policy of periodically updating indexes to more current periods, the Consumer Price Index was converted to a 1971=100 time reference base beginning with the publication hereunder of this index for August 1975. Other major Canadian Statistical series have or are likewise being converted to a 1971 time reference base.

Historical percentage rates of change in consumer prices will not be affected by this arithmetic conversion as illustrated in the example provided below which uses actual data:

#### Example:

relèvement des primes dans le cas de l'assurance automobile et de l'assurance immobilière. La hausse des prix de l'essence dans certaines provinces a aussi contribué à cette augmentation tout comme la hausse du prix des coupes de cheveux. Les prix de vêtements, comme c'est le cas depuis le début de l'année, n'ont guère bougé le mois dernier.

En ce qui concerne les biens et les services, le niveau de prix des biens a augmenté de 0.7% entre juillet et août alors que celui des services s'est accru de 1.7%.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation a progressé de 0.9% entre juillet et août, ce qui comprend une hausse de 0.7% de l'indice des aliments et une hausse de 0.9% de l'indice d'ensemble (sans les aliments).

En août, le taux annuel *courant* de variation de l'I.P.C. basé sur le mouvement désaisonnalisé des trois derniers mois était de 13.9%, soit un taux semblable à celui enregistré pendant la dernière partie de 1974.

#### Note aux utilisateurs de l'I.P.C.

Dans le cadre de sa politique de mise à jour périodique des indices sur une période plus courante, Statistique Canada a converti l'indice des prix à la consommation sur la période de référence 1971=100 à compter de la présente publication de cet indice qui porte sur le mois d'août 1975. D'autres importantes séries statistiques canadiennes ont déjà été ou seront également converties sur la période de référence 1971.

Les taux de variation historiques des prix à la consommation ne seront pas touchés par cette conversion arithmétique comme l'illustre l'exemple ci-après qui fait appel à des données réelles:

#### Exemple:

	Base 1961 = 100	Base 1971 = 100
August 1975 index — Indice d'août 1975 .....	188.4	141.2
July 1975 index — Indice de juillet 1975 .....	186.5	139.8
% Increase July 1975-August 1975 — Augmentation de juillet 1975 à août 1975 (%) .....	1.0%	1.0%
August 1974 index — Indice d'août 1974 .....	169.6	127.1
% Increase August 1974-August 1975 — Augmentation d'août 1974 à août 1975 (%) .....	11.1%	11.1%

It is recommended that users adopt the new official time base for contractual arrangements.

However, for the convenience of those requiring the All-Items CPI for Canada on the 1961 time base, this information will continue to be available from the Prices Division, Statistics Canada (613-994-9470).

Il est recommandé aux utilisateurs de se servir de la nouvelle période de référence officielle pour les dispositions contractuelles.

Toutefois, à l'intention de ceux qui ont besoin de l'indice d'ensemble des prix à la consommation sur la base 1961 = 100, ces renseignements seront disponibles sur demande auprès de la division des prix, Statistique Canada (613-994-9470).

	1975	185.6	187.0	187.1	188.9	190.7	190.2	192.0	193.6								

- (1) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 92. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 92.
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre .....	95.1	92.3
January - 1971 - Janvier .....	95.1	92.1
Average - 1971 - Moyenne .....	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 91. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 91.

- (1) All indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (2) Includes gold. - Y compris l'or.
- (3) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or.
- (4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros.
- (5) Excludes gold. - Sauf l'or.
- (6) See page 94 for additional information. - Pour des informations additionnelles voir page 94.
- (7) Final to July 1974. See page 93 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. - Indices définitifs jusqu'en juillet 1974. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 93 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

TABLE 6. Wholesale Price Indexes of Selected Primary Commodities(1)

TABLEAU 6. Indices des prix de gros de certains produits bruts(1)

1935-39=100

Primary commodities - Produits bruts	Months - Mois				Annual averages - Moyenne annuelle		
	Aug. 1975 Août	July 1975 Juill.	Aug. 1974 Août	July 1974 Juill.	1974	1973	1972
Coffee, green - Café vert .....	666.4	467.8	458.0	497.4	492.6	468.0	358.1

All-items Consumer Price Index converted to 1961=100, August 1975 - L'indice des prix à la consommation converti à 1961=100, août 1975 ..... 188.4

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

36	Oct. ....									
37	Nov. ....									
	Dec. ....									

- (1) Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 expenditure weights for Québec and Thunder Bay); those for May 1973 forward are based on 1967 expenditures. The revised series are linked to their predecessors at April 1973. For further explanation see page 95.
- (2) As of January 1975, the separate consumer price indexes for Saskatoon, Regina, Edmonton and Calgary supersede the combined-cities series. Users of the combined series are therefore advised to switch to the separate city indexes which are available only from April 1973. Should users have any questions, contact the Consumer Prices Section or consult the Retail Prices and Living Costs Service Bulletin, Catalogue 62-005, Volume 3, No. 5.
- (3) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.
- (4) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.

- (1) Avant mai 1973, les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957 (pour Québec et Thunder Bay sur les dépenses de 1964); à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.
- (2) A partir de janvier 1975, les indices séparés des prix à la consommation pour Saskatoon, Regina, Edmonton et Calgary remplacent les séries combinées. Nous conseillons donc aux utilisateurs des séries combinées d'utiliser les séries des indices séparés qui sont disponibles depuis avril 1973. Si il y a des questions, communiquez avec la section des prix aux consommateurs ou consultez le Bulletin de service sur les prix de détail et les coûts de la vie, no 62-005 au catalogue, volume 3, no 5.
- (3) Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.
- (4) Comprend le logement et l'entretien du ménage. Jusqu'en avril 1963, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.

(1) Not included in the Forestry machinery and equipment, East of the Rockies, composite index. - Non inclus dans l'indice synthétique de la machinerie et matériel forestiers à l'est des Rocheuses.

(2) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.

## EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR PRICE SERIES

### Industrial Price Indexes

#### Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

#### Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

#### "Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

## EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES SÉRIES DE PRIX

### Indices des prix industriels

#### Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-528 au catalogue).

#### Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

#### "Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillets, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

# **Purchase Price Indexes of Secondary Metals** (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

## **Canadian Farm Products Price Index** (1935-39 = 100)

Prices for Western grains used in the index are Canadian Wheat Board buying prices for grain in store at Vancouver or Thunder Bay.

Final payments for the crop year August 1973 - July 1974 were announced on December 24, 1974 and have been incorporated into the index. Estimates for the total 1974-75 payments are based on the initial payment plus half of the 1973-74 crop year final payment.

# **Indices du prix d'achat des métaux de deuxième fusion** (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

## **Indice des prix des produits agricoles canadiens** (1935-39 = 100)

Les prix des céréales de l'Ouest utilisés dans l'indice sont les prix d'achat de la Commission canadienne du blé pour les céréales entreposées à Vancouver ou à Thunder Bay.

Les paiements finals pour la campagne agricole août 1973 - juillet 1974 ont été annoncés le 24 décembre 1974 et ont été incorporés à l'indice. Les estimations des paiements totaux de 1974-75 sont basées sur le paiement initial plus la moitié du paiement final de la campagne agricole 1973-74.

## General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue 62-501).

## Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

## Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (n° 62-501 au catalogue).

## Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

#### **The Consumer Price Index for Canada (1971 = 100)**

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In August 1975, the time base was updated to 1971 = 100 from 1961 = 100.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision based on 1967 Expenditures)*, Catalogue 62-539.

#### **The Consumer Price Index for Canada Reclassified by Goods and Services**

A revised supplementary classification system, entitled "The Consumer Price Index reclassified by Goods and Services", was introduced in May 1973 with the revision of

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

#### **L'indice des prix à la consommation pour le Canada (1971 = 100)**

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En août 1975, on a aligné la base de temps de 1961 = 100 à 1971 = 100.

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

#### **L'indice des prix à la consommation au Canada reclassé par biens et services**

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que

the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

#### Consumer Price Indexes for Regional Cities (1971 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961 - avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, n° 62-005 au catalogue, vol. 2 n° 7.

#### Indices des prix de la consommation dans certaines agglomérations urbaines (1971 = 100)

Ces indices sont publiés tous les mois dans la présente publication (tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

## Purchasing Power of the 1971 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1975, compared with their average level in 1971, consumer prices as measured by the C.P.I. were 32.4% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1971 would cost the consumer \$132.40 in January 1975. Each consumer dollar in January 1975, therefore, buys less than in 1971, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1975 the purchasing power of the 1971 consumer dollar declined to approximately 76 cents ( $\$1.00 \times 100.0/132.4 = \$0.76$ ).

Users of the tabulation which shows the purchasing power of the 1971 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

## Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is

## Pouvoir d'achat du dollar de consommation 1971

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1975, par rapport au niveau de 1971, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 32.4%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1971 aurait coûté \$132.40 en janvier 1975 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1975 achète moins qu'en 1971, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1975, le pouvoir d'achat du dollar de consommation 1971 était tombé approximativement à 76 cents ( $\$1.00 \times 100.0/132.4 = \$0.76$ ).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1971 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

## Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation.

\$90.91  $((100.0/110.0) \times \$100)$ , which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6  $((90.91/80.00) \times 100)$ . Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages  $((\$100.00-\$80.00)/\$80.00 \times 100)$ .

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4  $((146.23/74.45) \times 100)$ . The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98  $((146.23/142.0) \times 100)$ . (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3  $((102.98/74.45) \times 100)$ .

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce

tion. La moyenne ajustée sera \$90.91  $((100.0/110.0) \times 100)$ , et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6  $((90.91/80.00) \times 100)$ . On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires  $((\$100.00-\$80.00)/\$80.00 \times 100)$ .

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4  $((146.23/74.45) \times 100)$ . Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98  $((146.23/142.0) \times 100)$ . (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3  $((102.98/74.45) \times 100)$ .

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie

savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

#### Inter-City Retail Price Comparisons

Measurements of retail price differentials prevailing between a number of Canadian urban centres previously published to reflect inter-city comparisons as of May 1965, May 1968, May 1969 and May 1971 have been revised to February 1975.

In this new series of updatings inter-city price comparisons will be drawn for goods and services comprising most of the budget on which the Consumer Price Index for Canada is currently based.

Table 14 presents the first five components of goods and services to be updated in this series. Price indexes for additional budget elements will be published on a component-by-component basis as each stage of these results becomes available. The data base for this study was the wide range of retail price quotations collected in the course of production of the national Consumer Price Index in addition to supplementary information gathered in a special program of pricing undertaken for publication of City Average Retail Prices (1).

(1) Retail Prices and Living Costs Service Bulletin, Vol. 4, No. 2, February, 1975.

du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

#### Comparaisons entre les prix de détail d'une ville à l'autre

Les mesures de la disparité des prix de détail qu'on observe dans un certain nombre de centres urbains du Canada, déjà publiées afin de donner les comparaisons entre les villes aux mois de mai 1965, mai 1968, mai 1969 et mai 1971 ont été révisées en février 1975.

Les nouvelles séries de mises à jour seront faites pour la plupart des biens et services servant actuellement à établir l'indice des prix à la consommation du Canada.

On trouvera au tableau 14, les résultats de la mise à jour des cinq premières composantes. Pour ce qui est des autres éléments du budget à la consommation, on publiera des indices de prix différentiels, composante par composante, au fur et à mesure que les résultats d'enquête seront disponibles. Les données de base pour cette étude ont été constituées par l'importante collection recueillie pour la production de l'indice national des prix à la consommation en plus de l'information supplémentaire obtenue dans le cadre d'un programme spécial de relevé des prix, dont les résultats permettent de publier les prix de détail moyens par ville(1).

(1) Bulletin de Service; Prix de détail et Coût de la Vie, Vol. 4, No 2, février 1975.

As previously, to facilitate price comparability between locations, differential price measurements are derived between separate pairs of cities in geographic proximity to each other. Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names wherever possible, and also having regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, paired city indexes are initially related to a common base city and subsequently compared with a weighted average of the combined 11 cities equalling 100. This is a departure from previous such studies which were based on Winnipeg price levels equalling 100. Item price relationships are aggregated by application of the 1967 combined cities weighting diagram updated for price change to February 1975.

Further information regarding Table 14 can be obtained from: Comparative Living Costs Section, Prices Division, Statistics Canada.

#### Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Comme par le passé, afin de faciliter la comparaison de prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour des paires de villes géographiquement proches. A l'intérieur de chaque paire de villes, le prix ont été assortis au niveau de l'article, c'est-à-dire en s'assurant que les spécifications étaient semblables, y compris la marque lorsque cela était possible, et aussi en tenant compte de la similitude des points de vente au détail et des méthodes de vente. En utilisant la méthode de couplage, les indices couplés des villes ont d'abord été reliés à une ville de base commune, puis comparé à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Ceci constitue une différence entre cette étude et les études précédentes qui posaient le niveau des prix de Winnipeg comme étant égal à 100. Les relations de prix des articles ont été regroupées en appliquant le schéma de la pondération de 1967 de villes combinées mis à jour en fonction des variations de prix observées en février 1975.

De plus amples renseignements concernant le tableau 14 peuvent être obtenus de: la Section des coûts comparatifs de la vie Division des Prix, Statistique Canada.

#### Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes 1961 = 100* (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004 au catalogue) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002 au catalogue).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

## Security Price Indexes

Revised security price indexes on the base 1971 = 100 were presented for the first time in the May 1975 issue of this publication. The revision constitutes changes in the composition and method of calculation of the indexes as well as a shift in the price reference base from 1961 to 1971.

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held for investment purposes. The portfolio represents stocks of Canadian companies listed on at least one Canadian exchange. The number of shares held for each issue is in proportion to the total number of shares outstanding as of January 1 of each year.

The indexes are calculated using the Laspeyres index formula. Prices for the weekly common stock indexes are the daily closing quotations from the exchange with the highest volume for each stock, averaged over the number of trading days in the particular week. For preferred stock, prices used are the monthly weighted averages of daily closing quotations in which the weights are the daily total sales. Index weighting at the group and sub-group level are based on the average yearly volume of shares traded over the period 1971 to 1974.

The stocks included in the indexes are classified according to the Standard Industrial Classification (revised 1970). Two new sub-groups have been established as part of the Investors Index: Radio and Television Broadcasting has been added to Utilities while Insurance has been added to the Finance group. The order of the sub-groups has been slightly rearranged and two sub-groups (Alcoholic Beverages and Trade) have undergone minor name changes.

For the list of stocks currently included in the indexes, see the special supplement in the May issue of Prices and Price Indexes.

## Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

## Indices des cours des valeurs mobilières

Les indices révisés des cours des valeurs mobilières sur la base 1971 = 100 ont été présentés pour la première fois dans le numéro de mai 1975 de cette publication. Cette révision comporte des changements à la composition et à la méthode de calcul des indices. Par ailleurs, la base de référence des prix 1961 a été changée en celle de 1971.

Les indices des cours des valeurs mobilières mesurent dans le temps les effets du mouvement des prix sur les valeurs d'un portefeuille d'actions achetées et détenues aux fins de placement. Ce portefeuille comprend des actions de sociétés canadiennes cotées à au moins une bourse du Canada. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation au 1er janvier de chaque année.

Les indices sont calculés d'après la formule de Laspeyres. Les prix servant au calcul des indices hebdomadaires sont les cours quotidiens de clôture pour la bourse où le volume des transactions est le plus élevé pour chaque titre. Ils sont ensuite mis en moyenne selon le nombre de jours ouvrables d'une semaine déterminée. En ce qui concerne les actions privilégiées, les prix utilisés sont les moyennes mensuelles pondérées des cours quotidiens de clôture dans lesquels les pondérations sont les ventes totales quotidiennes. Les pondérations des groupes principaux et des sous-groupes sont basées sur le volume annuel moyen de titres vendus au cours de la période 1971-1974.

Les actions faisant partie des indices sont classés selon la Classification des activités économiques de 1970. Deux nouveaux sous-groupes ont été créés en tant que partie de l'indice des cours des actions ordinaires: la radiodiffusion et la télédiffusion ont été ajoutées aux services tandis que les assurances ont été ajoutées au groupe des finances. Par ailleurs, l'ordre des sous-groupes a été modifié et le nom de deux d'entre eux (boissons alcooliques et commerce) a été changé.

Pour la liste des actions habituellement comprises dans les indices, consulter le supplément spécial dans l'édition de mai de la publication Prix et indices des prix.

## Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des question d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

## SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . figures not available.
- . . . figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . nombres indisponibles.
- . . . n'ayant pas lieu de figurer.
- néant ou zéro.
- - nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

## NOTES ON PRICES AND PRICE INDEX NUMBERS

### Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) rose 0.4% in September to 194.4 from the August index of 193.6. It was 9.3% higher than the September 1974 index of 177.8.

In terms of the relative contributions to the overall change in the total manufacturing index, the more notable changes were increases recorded in foods and beverages group (0.1%) with advances in slaughtering and meat packing (2.8%) feed manufacturers (2.2%) miscellaneous food products (1.4%) and poultry processors (2.8%). Price increases in the iron and steel mills industry (2.8%) were mainly responsible for moving the primary metals group to a higher level.

Decreases in the pulp and paper mills industry (-0.7%) were mainly responsible for a decline (-0.7%) in paper and allied products group. A slight decrease (0.3%) occurred in the wood industries.

## NOTES SUR LES PRIX ET LES INDICES DE PRIX

### Indice des prix de vente dans l'industrie: Industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie (ensemble des industries manufacturières) a augmenté de 0.4% entre août et septembre, passant de 193.6 à 194.4. L'indice était de 9.3% supérieur à celui de septembre 1974 (177.8).

En termes de contribution proportionnelle à la hausse générale de l'indice des industries manufacturières, les augmentations les plus sensibles ont été observées dans le groupe des aliments et des boissons, dont la progression de 0.1% est imputable à des hausses pour l'abattage et le conditionnement de la viande (+2.8%), la fabrication d'aliments pour animaux (+2.2%), l'industrie d'aliments divers (+1.4%) et le conditionnement de la volaille (+2.8%). Quant aux métaux primaires, la progression est en grande partie attribuable à la hausse des prix dans l'industrie du fer et de l'acier (+2.8%).

La baisse de 0.7% enregistrée dans l'industrie du papier et produits connexes est imputable à la diminution des prix dans l'industrie des pâtes et papier (-1.0%). Dans l'industrie du bois les prix ont légèrement diminué, soit de 0.3%.

## General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 0.4% to 501.8 from the revised August index of 499.6. It was 6.1% higher than a year earlier. Six of the eight major groups increased while two decreased.

The animal products group index rose 2.8% in September to 574.9 from the revised August index of 559.5 due mainly to higher prices recorded for lard and tallow 8.5%, cured meats 7.3%, livestock 5.8% and eggs 2.8%. The iron products group index increased 2.8% from the revised August index of 510.9 to 525.0 with increases in scrap iron and steel 5.0%, rolling mill products 4.8%, and tinplate and galvanized sheets 3.6%. The textile products group index increased 2.7% as the result of increases in cotton fabrics 6.9%, rayon yarn 4.6% and cotton yarns 3.4%. The non-ferrous metals group index rose 1.8% due to a 8.3% increase in the price of nickel. The non-metallic minerals group index rose 0.2% due to a 5.1% rise in pottery, and the chemical products group index rose 0.1% due to a 0.9% increase in soap and detergents.

The vegetable products group index decreased 3.0% to 467.8 from the revised August index of 482.3 due to lower prices recorded for potatoes 20.7%, sugar and its products 18.2%, fresh vegetables 18.1%, dried fruits 4.7%, and vegetable oil products 4.1%. The wood products group index decreased 0.8% with decreases in pine lumber 1.6%, newsprint and wrapping paper 1.2%, spruce and hardwoods 0.9%.

## Indice général des prix de gros (1935=100)

L'indice général des prix de gros est passé de 499.6 en août (chiffre rectifié) à 501.8 en septembre, ce qui représente une augmentation de 0.4%. L'indice était de 6.1% supérieur à celui de septembre 1974. On a enregistré des hausses dans six des huit groupes et des baisses dans les deux autres.

L'indice des produits d'origine animale a augmenté 2.8% pour passer de 559.5 en août (chiffre rectifié) à 574.9 en septembre à la suite de l'augmentation du saindoux et du suif (+8.5%), des viandes salées (+7.3%), du bétail (+5.8%) et des oeufs (+2.8%). L'indice du groupe des produits du fer est passé de 510.9 en août (chiffre rectifié) à 525.0 en septembre; cette progression de 2.8% est attribuable à la hausse du prix des déchets de fer et d'acier (+5.0%), des produits laminés (+4.8%) et des feuilles d'étain et de la tôle galvanisée (+3.6%). On a enregistré une augmentation de 2.7% de l'indice du groupe des produits textile attribuable à la majoration du prix des tissus de coton (+6.9%), des filés de rayonne (+4.6%) et de la filature (+3.4%). L'indice du groupe des métaux non ferreux a progressé de 1.8% en raison de l'augmentation de 8.3% du prix du nickel. L'indice des produits non métalliques s'est accru de 0.2% en raison de la hausse de 5.1% de la poterie. L'augmentation de 0.1% de l'indice du groupe des produits chimiques est imputable au relèvement de 0.9% du prix du savon et des détergents.

L'indice du groupe d'origine végétale a diminué de 3.0% passant de 467.8 en août (indice rectifié) à 482.3 en septembre. On signale des déclinés de 20.7% des pommes de terre, de 18.2% du sucre et ses dérivés, de 18.1% des légumes frais, de 4.7% des fruits séchés et de 4.1% des produits d'huile végétale. Des baisses de 1.6% du pin de sciage, de 1.2% du papier journal et du papier d'emballage et 0.9% de l'épinette et des feuillus ont fait baisser de 0.8% les produits du bois.

### Canadian Farm Products Price Index (1935-39 = 100)

The price index of Canadian farm products at terminal markets rose 0.9% to 521.5 in September, from the revised August index of 516.9. The animal products index advanced 3.7%, on price increases for steers, hogs, calves and eggs on both Eastern and Western markets, for lambs, poultry and cheesemilk in the East and for raw wool and fluid milk in the West. Lower prices were shown for lambs in the West.

The field products index decreased 3.1% to 411.2 from 424.3, reflecting lower prices for potatoes on both markets, for corn, barley, oats and hay in the East and for rye in the West. Higher prices were shown for rye in the East and for flax and hay in the West.

### Thirty Industrial Materials Price Index (1935-39 = 100)

The price index of 30 industrial materials, calculated as an unweighted geometric average, declined 0.7% to 484.8 in September from the revised August index of 488.4. Prices were higher for ten commodities, lower for nine and unchanged for eleven. Principal changes included decreases for flax, raw sugar, raw rubber, linseed oil, tin, iron ore, bleached sulphite pulp, crude oil and spruce lumber while increases were recorded for steel sheets, beef hides, structural shapes, raw cotton, steers, rayon, raw wool, hogs, oats and domestic wheat.

### Farm Input Price Index Fourth Quarter 1975

The Farm Input Price Index for Canada (1961 = 100) increased 2.0% in the 4th quarter of 1975, moving to 218.0 from a third quarter revised figure of 213.8. On a regional basis, the eastern index rose 1.4% to 217.4 from a revised 214.5 and the western index rose 2.8% to 218.8 from a revised third quarter figure of 212.9. Compared with the closing period of 1974 the index was 6.8% higher in Canada, 4.2% in the East, and 10.0% in the West. The annual increases 1975 over 1974 were 8.6%, 6.9% and 10.5% respectively.

Higher prices for Hired Farm Labour, Petroleum products, Machinery and Customer Work were responsible for much of the increase in the final quarter's index.

### The Consumer Price Index

The Consumer Price Index for Canada (1971 = 100) advanced 0.2% to 141.5 in September from 141.2 in August, reflecting a distinctly slower rate of rise than in the three preceding summer months. Lower food prices contributed to the deceleration, together with a somewhat less rapid rise in the index for All-Items excluding Food which moved up by

### Indice des prix des produits agricoles canadiens (1935-39 = 100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a augmenté de 0.9%; il est passé de 516.9 en août (chiffre rectifié) à 521.5 en septembre. L'indice des produits d'origine animale a progressé de 3.7% à la suite de la hausse du prix des bouvillons, des porcs, des veaux et des oeufs sur le marché de l'Est et de l'Ouest, des agneaux, de la volaille et du lait de fromagerie dans l'Est et la laine brute et du lait de consommation dans l'Ouest. On a enregistré une diminution du prix de l'agneau dans l'Ouest.

L'indice des produits de grande culture a diminué de 3.1%, passant de 424.3 à 411.2 à la suite de la baisse du prix des pommes de terre sur les deux marchés, du maïs, de l'orge, de l'avoine et du foin dans l'Est et du seigle dans l'Ouest. On a enregistré une augmentation du prix du seigle dans l'Est et du lin et du foin dans l'Ouest.

### Indice des prix de trente matières industrielles (1935-39 = 100)

L'indice des prix de 30 matières industrielles, calculé comme moyenne géométrique non pondérée, a diminué de 0.7% passant de 488.4 en août (chiffre rectifié) à 484.8 en septembre. Les prix de dix marchandises ont augmenté, ceux de neuf ont diminué et ceux des onze autres n'ont pas varié. Les principales variations comprennent des diminutions pour le sisal, le sucre brut, le caoutchouc brut, l'huile de lin, l'étain, le minerai de fer, la pâte blanchie au sulphite, le pétrole brut et les sciages d'épinette, tandis qu'on enregistrerait des hausses pour les feuilles d'acier, les peaux de boeuf, les profilés de charpente, le coton brut, les bouvillons, la rayonne, la laine brute, les porcs, l'avoine et le blé canadien.

### Indice des prix des entrées dans l'agriculture Quatrième trimestre 1975

L'indice canadien des prix des entrées dans l'agriculture (1961 = 100) a progressé de 2.0% au quatrième trimestre de 1975, passant de 213.8 (chiffre rectifié) au troisième trimestre à 218.0. À l'échelle régionale, l'indice de l'Est a progressé de 1.4%, passant de 214.5 (chiffre rectifié) à 217.4, et celui de l'Ouest a augmenté de 2.8%, passant de 212.9 (chiffre rectifié) à 218.8. Par rapport à la période correspondante de 1974, l'indice a progressé de 6.8% pour l'ensemble du Canada, de 4.2% dans l'Est et de 10.0% dans l'Ouest. Les progressions annuelles de 1974 à 1975 ont été de 8.6%, 6.9% et 10.5% respectivement.

Les hausses des prix de la main-d'oeuvre agricole salariée, des produits pétroliers, des machines et du travail sur commande ont été les principales causes de la progression de l'indice au dernier trimestre.

### L'indice des prix à la consommation

L'indice des prix à la consommation du Canada (1971 = 100) a progressé de 0.2%, passant de 141.2 en août à 141.5 en septembre; on a pu constater une nette diminution du taux d'accroissement par rapport aux trois mois précédents de la période estivale. La baisse du prix des aliments a contribué à ce ralentissement, ainsi qu'une augmentation quelque peu moins

0.7% as a result of higher prices for energy, shelter and clothing. In the twelve-month period between September 1974 and September 1975, the total CPI increased 10.6%.

A 0.7% decrease in the Food index was largely attributable to seasonally lower quotations for fresh produce, vegetables in particular; also contributing to this decline were lower prices for beef and for bakery products. In contrast, pork quotations continued their upward movement, increasing a further 6.5% in the latest month to a level 42% above that of a year earlier; poultry prices were also up between August and September. Over the twelve-month period ending September 1975, the total Food index registered an advance of 13.1%, with both the food consumed at and away from home components having increased at equal rates.

Higher energy prices, namely for fuel oil and gasoline in certain provinces, as well as advances in electricity and domestic gas rates in several cities, provided the major impetus behind the latest month's 0.7% rise in the index for All-Items excluding Food. Increased shelter costs for both home-owners and for renters also contributed to this advance, as did higher prices for men's and women's clothing.

Viewed in terms of goods and services, the price level of goods remained unchanged while that for services increased 0.5% between August and September.

The *seasonally adjusted* All-Items Consumer Price Index, in keeping with its invariable pattern for this particular time of year, displayed a higher rate of increase in comparison with its unadjusted counterpart, registering an advance of 0.6% between August and September; this included a 0.2% increase in the Food index and a 0.8% rise in the index for All-Items excluding Food.

In September, the *current* annual rate of change in the CPI, based on the seasonally adjusted movement since three months earlier was 10.2%, considerably lower than the rates registered more recently.

rapide de l'indice d'ensemble sans les aliments, qui a progressé de 0.7% par suite d'une majoration du prix de l'énergie, du logement et de l'habillement. Pendant la période de 12 mois entre septembre 1974 et septembre 1975, l'indice total des prix à la consommation a avancé de 10.6%.

La diminution de 0.7% de l'indice des aliments s'explique en grande partie par une baisse saisonnière du prix des fruits et légumes frais, notamment des légumes; elle est également attribuable à une diminution du prix du boeuf et des produits de boulangerie. En revanche, le prix du porc a continué à évoluer à la hausse et une nouvelle majoration de 6.5% au cours du dernier mois l'a porté à un niveau dépassant de 42% celui observé un an plus tôt. Le prix de la volaille a augmenté lui aussi d'août à septembre. Pendant la période de 12 mois se terminant en septembre 1975, l'indice total des aliments a marqué une avance de 13.1%, les aliments consommés à la maison et à l'extérieur ayant présenté un taux d'accroissement égal.

Le renchérissement de l'énergie, notamment du mazout et de l'essence dans certaines provinces, ainsi que la majoration de tarifs dans plusieurs villes dans le cas de l'électricité et du gaz de consommation domestique, expliquent principalement la progression de 0.7% qu'a fait ressortir au cours du dernier mois l'indice d'ensemble sans les aliments. L'augmentation des frais de logement tant pour les propriétaires que pour les locataires a également contribué à cette progression, de même que la hausse du prix des vêtements pour hommes et pour dames.

Sous l'angle des biens et services, le niveau des prix des biens n'a pas changé, alors que celui du prix des services progressait de 0.5% d'août à septembre.

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation, conformément à la tendance qu'il a toujours présentée pour cette période déterminée de l'année, a fait apparaître un taux plus élevé d'accroissement que l'indice non désaisonnalisé, marquant une avance de 0.6% d'août à septembre; on a relevé une hausse de 0.2% de l'indice des aliments et de 0.8% de l'indice d'ensemble sans les aliments.

En septembre, le taux annuel *courant* de variation de l'I.P.C., qui vise le mouvement désaisonnalisé depuis trois mois de la même année, s'est établi à 10.2%, en baisse très nette sur les taux observés plus récemment.

Investment and loan - Placements et prêts .....	106.9	112.1	84.8	91.8	- 4.6	- 7.6	26.1
Insurance - Assurances .....	89.6	97.0	84.1	96.8	- 7.6	- 13.1	6.5
<b>Mining - Indices des titres miniers</b>							
Gold - Or .....	103.6	114.6	109.6	136.3	- 9.6	- 19.6	- 5.5
Base metals - Métaux communs .....	174.4	203.8	205.3	269.8	- 14.4	- 23.9	- 15.1
Uranium - Uranium .....	69.7	71.8	63.8	72.3	- 2.9	- 11.8	9.2
Primary oils and gas - Pétrole et gaz primaires .....	205.6	209.5	143.9	169.4	- 1.9	- 15.1	42.9
	83.6	86.0	59.0	70.1	- 2.8	- 15.8	41.7

- (1) Gross weighted, including inter-industry shipments. For explanation see page 92. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 92.
- (2) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1974 are subject to revision. See notes page 93 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1974 sont sujets à révision. Voir les renvois de la page 93 pour les prix détaillés des grains de l'Ouest.

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities

TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month - Mois													Annual Annuel
	1971	1972	1973	1974	1975									
Industry selling price index: manufacturing(7) - Indice de prix de vente dans l'industrie: industries manufactu- rières(7).	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973	133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.9	147.7	149.0	150.4	152.9	142.7
	1974	157.4	160.1	162.7	165.7	168.5	170.1	173.1	176.2	177.8	179.7	182.6	182.7	
	1975	185.6	187.0	187.1	188.9	190.7	190.2	192.0	193.6	194.4				

(1) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont  
sujets à révision.

(2) This industry was changed in commodity content, price sample and weights in accordance with  
significant changes within the industry. Figures are revised from January 1971 to date. - La composition  
en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie  
conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés  
de janvier 1971 à aujourd'hui.

(3) Effective January 1973 changes have been made in the calculation of this index. For details see page 92. - A  
compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 92.

(4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in  
same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have  
resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision  
approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus  
sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a  
amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix  
industriels.

	Old series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been  
selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price  
quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are  
available on request. - Les chiffres de cette série ont été révisée à partir de janvier 1969. Une liste  
augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour  
former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière  
générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur  
certain produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

(6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix  
de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.

(7) Gross weighted, including inter-industry shipments. For explanation see page 91. - Indice pondéré brut  
comprenant les livraisons inter-industrielles. Pour toute explication voir page 91.

- (1) All indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (2) Includes gold. - Y compris l'or.
- (3) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or.
- (4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros.
- (5) Excludes gold. - Sauf l'or.
- (6) See page 94 for additional information. - Pour des informations additionnelles voir page 94.
- (7) Final to July 1974. See page 93 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. - Indices définitifs jusqu'en juillet 1974. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 93 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

All-items Consumer Price Index converted to 1961=100, September 1975 - L'indice des prix à la consommation converti à 1961=100, septembre 1975 ..... 188.8

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

Services .....	136.1	135.4	122.9	122.5	120.5	111.7	105.2
Shelter services - Habitation .....	134.2	133.3	123.4	123.0	121.2	112.9	105.5
Household utilities - Services publics aux ménages .....	132.9	131.4	117.5	117.5	116.6	109.4	102.3
Domestic services - Services aux ménages .....	164.1	162.6	137.7	136.1	132.3	115.1	107.6
Health, personal care, and clothing services - Hygiène, soins personnels et services vestimentaires .....	148.6	148.0	130.9	129.6	127.7	113.5	106.0
Recreation, education, and communication services - Loisirs, formation et communications .....	125.7	125.2	117.2	116.4	115.3	109.6	104.9
Transportation services - Transports .....	137.8	137.7	118.8	118.6	115.7	106.6	104.0

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14.

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

**Nota:** (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

- (1) Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 expenditure weights for Québec and Thunder Bay); those for May 1973 forward are based on 1967 expenditures. The revised series are linked to their predecessors at April 1973. For further explanation see page 95.
- (2) As of January 1975, the separate consumer price indexes for Saskatoon, Regina, Edmonton and Calgary supersede the combined-cities series. Users of the combined series are therefore advised to switch to the separate city indexes which are available only from April 1973. Should users have any questions, contact the Consumer Prices Section or consult the Retail Prices and Living Costs Service Bulletin, Catalogue 62-005, Volume 3, No. 5.
- (3) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.
- (4) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.

- (1) Avant mai 1973, les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957 (pour Québec et Thunder Bay sur les dépenses de 1964); à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.
- (2) A partir de janvier 1975, les indices séparés des prix à la consommation pour Saskatoon, Regina, Edmonton et Calgary remplacent les séries combinées. Nous conseillons donc aux utilisateurs des séries combinées d'utiliser les séries des indices séparés qui sont disponibles depuis avril 1973. Si il y a des questions, communiquez avec la section des prix aux consommateurs ou consultez le Bulletin de service sur les prix de détail et les coûts de la vie, no 62-005 au catalogue, volume 3, no 5.
- (3) Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.
- (4) Comprend le logement et l'entretien du ménage. Jusqu'en avril 1963, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.

## EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR PRICE SERIES

### Industrial Price Indexes

#### Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

#### Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

#### "Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

## EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES SÉRIES DE PRIX

### Indices des prix industriels

#### Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-528 au catalogue).

#### Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

#### "Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

### Purchase Price Indexes of Secondary Metals (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

### Canadian Farm Products Price Index (1935-39 = 100)

Prices for Western grains used in the index are Canadian Wheat Board buying prices for grain in store at Vancouver or Thunder Bay.

Final payments for the crop year August 1973 - July 1974 were announced on December 24, 1974 and have been incorporated into the index. Estimates for the total 1974-75 payments are based on the initial payment plus half of the 1973-74 crop year final payment.

### Indices du prix d'achat des métaux de deuxième fusion (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

### Indice des prix des produits agricoles canadiens (1935-39 = 100)

Les prix des céréales de l'Ouest utilisés dans l'indice sont les prix d'achat de la Commission canadienne du blé pour les céréales entreposées à Vancouver ou à Thunder Bay.

Les paiements finals pour la campagne agricole août 1973 - juillet 1974 ont été annoncés le 24 décembre 1974 et ont été incorporés à l'indice. Les estimations des paiements totaux de 1974-75 sont basées sur le paiement initial plus la moitié du paiement final de la campagne agricole 1973-74.

## General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue 62-501).

### Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

## Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (n° 62-501 au catalogue).

### Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

#### **The Consumer Price Index for Canada (1971 = 100)**

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In August 1975, the time base was updated to 1971 = 100 from 1961 = 100.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision based on 1967 Expenditures)*, Catalogue 62-539.

#### **The Consumer Price Index for Canada Reclassified by Goods and Services**

A revised supplementary classification system, entitled "The Consumer Price Index reclassified by Goods and Services", was introduced in May 1973 with the revision of

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

#### **L'indice des prix à la consommation pour le Canada (1971 = 100)**

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En août 1975, on a aligné la base de temps de 1961 = 100 à 1971 = 100.

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

#### **L'indice des prix à la consommation au Canada reclassé par biens et services**

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que

the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

### Consumer Price Indexes for Regional Cities (1971 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961 - avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, n° 62-005 a, catalogue, vol. 2 n° 7.

### Indices des prix de la consommation dans certaines agglomérations urbaines (1971 = 100)

Ces indices sont publiés tous les mois dans la présente publication (tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada comprenait et ne comprend toujours que les changements de loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement (et l'ensemble pour les villes tendent à sous-estimer quelque peu le taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

## Purchasing Power of the 1971 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1975, compared with their average level in 1971, consumer prices as measured by the C.P.I. were 32.4% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1971 would cost the consumer \$132.40 in January 1975. Each consumer dollar in January 1975, therefore, buys less than in 1971, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1975 the purchasing power of the 1971 consumer dollar declined to approximately 76 cents ( $\$1.00 \times 100.0/132.4 = \$0.76$ ).

Users of the tabulation which shows the purchasing power of the 1971 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

## Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is

## Pouvoir d'achat du dollar de consommation 1971

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1975, par rapport au niveau de 1971, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 32.4%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1971 aurait coûté \$132.40 en janvier 1975 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1975 achète moins qu'en 1971, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1975, le pouvoir d'achat du dollar de consommation 1971 était tombé approximativement à 76 cents ( $\$1.00 \times 100.0/132.4 = \$0.76$ ).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1971 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

## Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation.

\$90.91  $((100.0/110.0) \times \$100)$ , which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6  $((90.91/80.00) \times 100)$ . Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages  $((\$100.00-\$80.00/\$80.00) \times 100)$ .

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961=100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961=100) is 196.4  $((146.23/74.45) \times 100)$ . The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98  $((146.23/142.0) \times 100)$ . (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961=100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961=100) is 138.3  $((102.98/74.45) \times 100)$ .

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce

tion. La moyenne ajustée sera \$90.91  $((100.0/110.0) \times 100)$ , ce que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel de salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6  $((90.91/80.00) \times 100)$ . On pourra appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus de biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires  $((\$100.00-\$80.00/\$80.00) \times 100)$ .

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961=100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961=100) est 196.4  $((146.23/74.45) \times 100)$ . Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98  $((146.23/142.0) \times 100)$ . (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961=100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961=100), sera 138.3  $((102.98/74.45) \times 100)$ .

Il convient de souligner que, même si les estimations de salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une part

savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

#### Inter-City Retail Price Comparisons

Measurements of retail price differentials prevailing between a number of Canadian urban centres previously published to reflect inter-city comparisons as of May 1965, May 1968, May 1969 and May 1971 have been revised to February 1975.

In this new series of updatings inter-city price comparisons will be drawn for goods and services comprising most of the budget on which the Consumer Price Index for Canada is currently based.

Table 14 presents the first five components of goods and services to be updated in this series. Price indexes for additional budget elements will be published on a component-by-component basis as each stage of these results becomes available. The data base for this study was the wide range of retail price quotations collected in the course of production of the national Consumer Price Index in addition to supplementary information gathered in a special program of pricing undertaken for publication of City Average Retail Prices(1).

(1) Retail Prices and Living Costs Service Bulletin, Vol. 4, No. 2, February, 1975.

du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

#### Comparaisons entre les prix de détail d'une ville à l'autre

Les mesures de la disparité des prix de détail qu'on observe dans un certain nombre de centres urbains du Canada, déjà publiées afin de donner les comparaisons entre les villes aux mois de mai 1965, mai 1968, mai 1969 et mai 1971 ont été révisées en février 1975.

Les nouvelles séries de mises à jour seront faites pour la plupart des biens et services servant actuellement à établir l'indice des prix à la consommation du Canada.

On trouvera au tableau 14, les résultats de la mise à jour des cinq premières composantes. Pour ce qui est des autres éléments du budget à la consommation, on publiera des indices de prix différentiels, composante par composante, au fur et à mesure que les résultats d'enquête seront disponibles. Les données de base pour cette étude ont été constituées par l'importante collection recueillie pour la production de l'indice national des prix à la consommation en plus de l'information supplémentaire obtenue dans le cadre d'un programme spécial de relevé des prix, dont les résultats permettent de publier les prix de détail moyens par ville(1).

(1) Bulletin de Service: Prix de détail et Coût de la Vie, Vol. 4, No 2, février 1975.

As previously, to facilitate price comparability between locations, differential price measurements are derived between separate pairs of cities in geographic proximity to each other. Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names wherever possible, and also having regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, paired city indexes are initially related to a common base city and subsequently compared with a weighted average of the combined 11 cities equalling 100. This is a departure from previous such studies which were based on Winnipeg price levels equalling 100. Item price relationships are aggregated by application of the 1967 combined cities weighting diagram updated for price change to February 1975.

Further information regarding Table 14 can be obtained from: Comparative Living Costs Section, Prices Division, Statistics Canada.

#### Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Comme par le passé, afin de faciliter la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour des paires de villes géographiquement proches. A l'intérieur de chaque paire de villes, les prix ont été assortis au niveau de l'article, c'est-à-dire en s'assurant que les spécifications étaient semblables, y compris la marque lorsque cela était possible, et aussi en tenant compte de la similitude des points de vente au détail et des méthodes de vente. En utilisant la méthode de couplage, les indices couplés des villes ont d'abord été reliés à une ville de base commune, puis comparés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Ceci constitue une différence entre cette étude et les études précédentes qui posaient le niveau des prix de Winnipeg comme étant égal à 100. Les relations de prix des articles ont été regroupées en appliquant le schéma de la pondération de 1967 des villes combinées mis à jour en fonction des variations de prix observées en février 1975.

De plus amples renseignements concernant le tableau 14 peuvent être obtenus de: la Section des coûts comparatifs de la vie, Division des Prix, Statistique Canada.

#### Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004 au catalogue) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002 au catalogue).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

## Security Price Indexes

Revised security price indexes on the base 1971 = 100 were presented for the first time in the May 1975 issue of this publication. The revision constitutes changes in the composition and method of calculation of the indexes as well as a shift in the price reference base from 1961 to 1971.

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held for investment purposes. The portfolio represents stocks of Canadian companies listed on at least one Canadian exchange. The number of shares held for each issue is in proportion to the total number of shares outstanding as of January 1 of each year.

The indexes are calculated using the Laspeyres index formula. Prices for the weekly common stock indexes are the daily closing quotations from the exchange with the highest volume for each stock, averaged over the number of trading days in the particular week. For preferred stock, prices used are the monthly weighted averages of daily closing quotations in which the weights are the daily total sales. Index weighting at the group and sub-group level are based on the average yearly volume of shares traded over the period 1971 to 1974.

The stocks included in the indexes are classified according to the Standard Industrial Classification (revised 1970). Two new sub-groups have been established as part of the Investors Index: Radio and Television Broadcasting has been added to Utilities while Insurance has been added to the Finance group. The order of the sub-groups has been slightly rearranged and two sub-groups (Alcoholic Beverages and Trade) have undergone minor name changes.

For the list of stocks currently included in the indexes, see the special supplement in the May issue of Prices and Price Indexes.

## Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

## Indices des cours des valeurs mobilières

Les indices révisés des cours des valeurs mobilières sur la base 1971 = 100 ont été présentés pour la première fois dans le numéro de mai 1975 de cette publication. Cette révision comporte des changements à la composition et à la méthode de calcul des indices. Par ailleurs, la base de référence des prix 1961 a été changée en celle de 1971.

Les indices des cours des valeurs mobilières mesurent dans le temps les effets du mouvement des prix sur les valeurs d'un portefeuille d'actions achetées et détenues aux fins de placement. Ce portefeuille comprend des actions de sociétés canadiennes cotées à au moins une bourse du Canada. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation au 1er janvier de chaque année.

Les indices sont calculés d'après la formule de Laspeyres. Les prix servant au calcul des indices hebdomadaires sont les cours quotidiens de clôture pour la bourse où le volume des transactions est le plus élevé pour chaque titre. Ils sont ensuite mis en moyenne selon le nombre de jours ouvrables d'une semaine déterminée. En ce qui concerne les actions privilégiées, les prix utilisés sont les moyennes mensuelles pondérées des cours quotidiens de clôture dans lesquels les pondérations sont les ventes totales quotidiennes. Les pondérations des groupes principaux et des sous-groupes sont basées sur le volume annuel moyen de titres vendus au cours de la période 1971-1974.

Les actions faisant partie des indices sont classés selon la Classification des activités économiques de 1970. Deux nouveaux sous-groupes ont été créés en tant que partie de l'indice des cours des actions ordinaires: la radiodiffusion et la télédiffusion ont été ajoutées aux services tandis que les assurances ont été ajoutées au groupe des finances. Par ailleurs, l'ordre des sous-groupes a été modifié et le nom de deux d'entre eux (boissons alcooliques et commerce) a été changé.

Pour la liste des actions habituellement comprises dans les indices, consulter le supplément spécial dans l'édition de mai de la publication Prix et indices des prix.

## Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

## NOTES ON PRICES AND PRICE INDEX NUMBERS

### Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 0.5% in October to 195.4 from the September index of 194.4.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in primary metals group (1.9%) with advances in iron and steel mills (3.0%) and smelting and refining (1.1%) and steel pipe and tube mills (7.2%). Increases also occurred in the food and beverages group (0.3%) reflecting higher prices in slaughtering and meat packing (0.7%), misc. food manufacturers (1.5%) and the fish products industry (2.3%) outweighing declines in sugar refineries (4.1%) and vegetable oil mills (4.6%). Price increases recorded in corrugated box manufacturers (4.9%) and pulp and paper mills (0.3%) were mainly responsible for advances in paper and allied products (0.6%).

Decreases in sawmills and planing mills industry (3.3%) contributed largely to a decline (1.3%) in wood products group.

## NOTES SUR LES PRIX ET LES INDICES DE PRIX

### Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (ensemble des industries manufacturières) a augmenté de 0.5% entre septembre et octobre, passant de 194.4 à 195.4.

En ce qui concerne la contribution relative à la variation générale de l'indice des industries manufacturières, les hausses les plus sensibles ont été observées dans le groupe de la première transformation des métaux, dont la progression de 1.9% est imputable aux augmentations observées dans les industries du fer et de l'acier (3.0%), de la fonte et de l'affinage (1.1% et des fabriques de tubes et tuyaux d'acier (7.2%). Le groupe des aliments et boissons a également progressé, en raison de l'augmentation des prix dans les industries de l'abattage et du conditionnement de la viande (0.7%), des aliments divers (1.5%) et du poisson (2.3%). Ces augmentations n'ont pas réussi à compenser les diminutions de prix enregistrées dans les cas des raffineries de sucre (-4.1%) et des fabriques d'huile végétale (-4.6%). L'augmentation notée dans l'industrie du papier et produits connexes est attribuable aux majorations annoncées par les fabricants de boîte en carton ondulé (4.9%) et l'industrie des pâtes et papier (0.3%).

La baisse de 1.3% dans le cas de l'industrie du bois est imputable en grande partie à la réduction des prix dans les scieries (-3.3%).

## General Wholesale Price Index (1935-39 = 100)

The general wholesale price index rose 0.3% in October to 503.5 from the revised September index of 502.2. It was 5.1% higher than a year earlier. Five of the eight major groups increased while three decreased.

The iron products group index increased 1.8% in October to 534.7 from the revised September index of 525.2 due to increases in iron foundries and steel pipe and tubing 5.5%, rolling mill products 2.9% and wire 2.5%. The textile products group index rose 1.3% in October to 415.3 from the revised September index of 409.8 with higher prices recorded for cotton yarns 5.0% raw cotton 3.9% and worsted and wool cloth 2.9%. The non-metallic minerals group index rose 1.2% because of a 11.3% increase in plaster, a 9.3% increase in plate glass and a 5.8% increase in coal tar. The chemical products group increased 0.9% due to increases in soap and detergents 4.0%, organic chemicals 2.7% and drugs and pharmaceuticals 1.4%. The wood products group showed little overall change 0.3% as higher prices for cedar 7.8% were almost offset by lower prices for other species of wood, notably spruce 9.3%. Building board increased 6.4%.

The animal products group index decreased 0.8% to 570.6 from the revised September index of 575.0 as lower prices were recorded for livestock 4.3% and cured meats 1.6%. The vegetable products group index declined 0.5% with decreases for fresh vegetables 9.8%, sugar and its products 6.5% (now less than half the level recorded a year earlier) and vegetable oil products 4.3%. The non-ferrous metals group index declined 0.2% due to decreases in silver 4.3% and lead and its products 1.1%.

## Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est passé de 502.2 en septembre (chiffre rectifié) à 503.5 en octobre, soit une augmentation de 0.3%. L'indice était de 5.1% supérieur à celui d'octobre 1975. On a enregistré des hausses pour cinq des huit groupes et des baisses pour les trois autres.

L'indice du groupe des produits du fer a augmenté de 1.8%, passant de 525.2 en septembre (chiffre rectifié) à 534.7 en octobre à la suite de l'augmentation observée dans le cas des fonderies de fer et des tubes et tuyaux d'acier (5.5%), des produits laminés (2.9%) et des fils métalliques (2.5%). L'indice du groupe des textiles est passé de 409.8 en septembre (chiffre rectifié) à 415.3 en octobre; cette progression de 1.3% est attribuable à la hausse du prix des fils de coton (5.0%), du coton brut (3.9%) et de la laine peignée et des tissages de laine (2.9%). On a enregistré une augmentation de 1.2% de l'indice des produits minéraux non métalliques, attribuable à la majoration du prix du plâtre (11.3%) du verre en plaques (9.3%) et du goudron de houille (5.8%). L'indice du groupe des produits chimiques a progressé de 0.9% en raison des augmentations de 4.0% du savon et des détergents, de 2.7% des produits chimiques organiques et de 1.4% des produits pharmaceutiques. L'indice du groupe des produits du bois s'est légèrement accru, soit de 0.3%; l'augmentation de 7.8% du prix du cèdre a été presque compensée entièrement par une diminution du prix d'autres espèces de bois, comme l'épinette (-9.3%). Le prix des panneaux de construction s'est accru de 6.4%.

L'indice du groupe des produits d'origine animale diminué de 0.8%, passant de 575.0 en septembre (chiffre rectifié) à 570.6 en octobre. Cette baisse est attribuable à la diminution du prix du bétail (-4.3%) et de viandes salées et traitées (-1.6%). La baisse de 0.5% de l'indice du groupe des produits d'origine végétale est imputable à la diminution du prix des légumes frais (-9.8%), du sucre et de ses produits (-6.5%) et des dérivés d'huile végétale (-4.3%). À noter que le prix du sucre et de ses produits diminué de plus de moitié par rapport à l'année précédente. L'indice du groupe des métaux non ferreux s'est replié de 0.2% à la suite de la diminution du prix de l'argent (-4.3%) et du plomb et de ses produits (-1.1%).

## The Consumer Price Index

The Consumer Price Index for Canada (1971 = 100) advanced 0.9% to 142.8 in October from 141.5 in September with higher shelter charges accounting for one-half of this latest increase. The Food index rose 0.4%, while the index for All-Items excluding Food moved up 1.1%. In the twelve-month period between October 1974 and October 1975, the total CPI increased 10.6%.

Higher beef prices and to a lesser extent, those for pork, were major contributing factors to the 0.4% rise in the Food index. Increases in the price of fresh vegetables, coffee, canned salmon and restaurant meals also contributed to this advance. Seasonally lower quotations for fresh fruit partially offset these rises, as did lower prices for sugar. Fats and oils products, including margarine, declined in price for the sixth consecutive month.

Higher home ownership charges, largely attributable to an average rise of over 13% in annual residential property taxes, were mainly responsible for the 1.1% increase in the index for All-Items excluding Food. Other notable contributors to this advance included increased local transit fares in Montreal, higher water rates in several municipalities and increased charges for dental care. The price of alcoholic beverages for home consumption was also up in a number of provinces.

Viewed in terms of goods and services, the price level of goods was up 0.3% while that for services increased 2.0%.

On a *seasonally adjusted* basis, the All-Items Consumer Price Index advanced 1.1% between September and October; this comprised a 1.4% increase in the Food index, substantially higher than its 0.4% rise on the unadjusted basis, and a 1.0% advance for All-Items excluding Food.

In October, the *current* annual rate of change in the CPI based on the seasonally adjusted movement since three months earlier was 10.7%, up slightly from the month previous.

## L'indice des prix à la consommation

L'indice des prix à la consommation au Canada (1971 = 100) a progressé de 0.9%, passant de 141.5 en septembre à 142.8 en octobre; la hausse des frais de logement compte pour la moitié de cette augmentation. L'indice des aliments a augmenté de 0.4% alors que l'indice d'ensemble, sans les aliments, a monté de 1.1%. Au cours de la période de douze mois comprise entre octobre 1974 et octobre 1975, l'indice total des prix à la consommation a progressé de 10.6%.

La hausse du prix du boeuf et, dans une mesure moindre, celle du prix du porc sont les principales causes de la hausse de 0.4% de l'indice des aliments. Les hausses de prix de légumes frais, du café, du saumon en conserve et des repas pris dans les restaurants expliquent également cette avance. La baisse saisonnière du prix des fruits frais et la baisse du prix du sucre ont contrebalancé en partie ces augmentations. Le prix des huiles et corps gras, y compris la margarine, a baissé pour le sixième mois consécutif.

La hausse des frais de propriété, en grande partie attribuable à une hausse moyenne de plus de 13% des taxes annuelles de propriété résidentielle, est la cause principale de l'augmentation de 1.1% de l'indice d'ensemble sans les aliments. Ont aussi largement contribué à cette avance, la hausse des tarifs du transport urbain à Montréal, des taux d'approvisionnement en eau dans diverses municipalités et des frais de soins dentaires. Le prix des boissons alcooliques consommées à la maison a aussi augmenté dans diverses provinces.

En ce qui concerne les biens et services, le niveau du prix des biens a progressé de 0.3% et celui des services, de 2.0%.

Après *désaisonnalisation*, l'indice d'ensemble des prix à la consommation a progressé de 1.1% entre septembre et octobre, avec une hausse de 1.4% de l'indice des aliments, comparative-ment à une hausse avant désaisonnalisation de 0.4%, et à une avance de 1.0% de l'indice d'ensemble sans les aliments.

En octobre, le taux annuel *courant* de variation de l'I.P.C. basé sur le mouvement désaisonné des trois derniers mois était de 10.7%, légèrement supérieur à celui du mois précédent.

TABLE 2. Industry Selling Price Indexes by Industry and Selected Commodities

TABLEAU 2. Indice des prix de vente dans l'industrie par industrie et par certains produits

1961 = 100

Industries and selected commodities(1)	Month - Mois												Annual	
Industrie et certains produits(1)													Annuel	
	1971													
	1972													
	1973													
	1974													
	1975													
Industry selling price index: manufacturing(7) - Indice de prix de vente dans l'industrie: industries manufactu- rières(7).	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973	133.1	134.6	136.6	138.2	139.5	141.0	143.0	147.9	147.7	149.0	150.4	152.9	142.7
	1974	157.4	160.1	162.7	165.7	168.5	170.1	173.1	176.2	177.8	180.0	182.6	182.7	
	1975	185.6	187.0	187.1	188.9	190.7	190.2	192.0	193.6	194.4	195.4			

(1) Indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.

(2) This industry was changed in commodity content, price sample and weights in accordance with significant changes within the industry. Figures are revised from January 1971 to date. - La composition en marchandises, les échantillons de prix et les mesures de poids ont changé dans cette industrie conformément à des changements importants survenus dans l'industrie même. Les chiffres sont révisés de janvier 1971 à aujourd'hui.

(3) Effective January 1973 changes have been made in the calculation of this index. For details see page 92. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 92. - A

(4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre .....	95.1	92.3
January - 1971 - Janvier .....	95.1	92.1
Average - 1971 - Moyenne .....	95.2	91.8

(5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un indice total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certain produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

(6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.

(7) Gross weighted, including inter-industry shipments. For explanation see page 91. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 91.

- (1) All indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.
- (2) Includes gold. - Y compris l'or.
- (3) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or.
- (4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros.
- (5) Excludes gold. - Sauf l'or.
- (6) See page 94 for additional information. - Pour des informations additionnelles voir page 94.
- (7) Final to July 1974. See page 93 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. - Indices définitifs jusqu'en juillet 1974. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 93 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

TABLE 6. Wholesale Price Indexes of Selected Primary Commodities(1)

TABLEAU 6. Indices des prix de gros de certains produits bruts(1)

1935-39=100

Primary commodities - Produits bruts	Months - Mois				Annual averages - Moyenne annuelle		
	Oct. 1975	Sept. 1975	Oct. 1974	Sept. 1974	1974	1973	1972
	Oct.	Sept.	Oct.	Sept.			
Coffee, green - Café vert .....	637.3	642.5	466.0	460.2	492.6	468.0	358.1
Copper, electrolytic - Cuivre électrolytique ...	590.9	590.9	741.2	769.2	730.3	594.4	474.3
Cotton, raw - Coton brut .....	457.8	440.6	510.0	508.6	526.8	389.7	330.0
Eggs - Oeufs .....	237.1	234.4	219.6	212.9	217.7	196.1	136.2
Fruits, fresh - Fruits frais .....	308.2	315.0	294.0	307.4	284.3	263.9	223.5
Grains - Céréales .....	535.5	529.2	598.6	538.8	562.9	406.1	205.7
Hides and skins - Cuirs et peaux vertes .....	221.7	204.1	165.8	208.3	220.2	323.9	294.1
Lead, electrolytic - Plomb électrolytique .....	361.8	372.9	502.7	516.1	500.2	367.0	323.2
Livestock - Bétail .....	680.1	710.5	602.6	634.8	611.1	606.7	458.7
Onions - Oignons .....	360.3	419.5	266.5	289.3	328.7	476.7	259.8
Potatoes - Pommes de terre .....	526.5	543.4	363.5	343.0	626.7	485.9	219.1
Rubber, raw - Caoutchouc brut .....	198.9	199.6	200.2	201.4	246.8	222.7	114.0
Scrap iron and steel - Déchets de fer et d'acier	492.0	503.2	797.7	796.7	740.6	388.8	268.1
Silver - Argent .....	1185.3	1238.2	1194.4	1027.3	1180.8	663.3	430.6
Steers - Bouvillons .....	781.6	793.4	780.4	820.0	803.9	645.3	597.6
Sugar, raw - Sucre brut .....	476.4	539.0	1225.8	1037.5	943.5	321.0	253.9
Tin - Etain .....	697.7	697.7	685.5	808.8	764.4	435.6	338.8
Wool, raw domestic - Laine brute indigène .....	246.1	248.9	279.0	307.4	334.3	492.5	201.7
Wool, raw, imported - Laine brute importée .....	259.3	256.3	228.4	248.5	284.4	379.6	196.8
Zinc, prime, western - Zinc de première qualité, de l'Ouest .....	822.8	822.8	822.8	822.8	767.2	522.6	411.6

(1) All indexes for 1974 and 1975 are subject to revision. - Les indices pour 1974 et 1975 sont sujets à révision.

TABLE 7. Wholesale Prices of Selected Commodities  
(All prices given in Canadian funds)

TABLEAU 7. Prix de gros de certains produits  
(en dollars canadiens)

Commodity Produit	Months - Mois				Annual averages Moyenne annuelle

All-items Consumer Price Index converted to 1961=100, October 1975 - L'indice des prix à la consommation converti à 1961=100, octobre 1975 ..... 190.5

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)

1971=100

	Oct. 1975	Sept. 1975	Oct. 1974	Sept. 1974	1974	1973	1972
All-items - Indice d'ensemble .....	142.8	141.5	129.1	127.9	125.0	112.7	104.8
Food - Aliments .....	167.3	166.6	149.4	147.3	143.4	123.3	107.6

Recreation, education, and communication services - Loisirs, formation et communications .....	126.9	125.7	119.3	117.2	115.3	109.6	104.9
Transportation services - Transports .....	139.9	137.8	118.5	118.8	115.7	106.6	104.0

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 95. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

**Note:** (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14.

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au tableau 14.

37	Déc. ....						

- (1) Indexes prior to May 1973 incorporate 1957 expenditure weights (1964 expenditure weights for Québec and Thunder Bay); those for May 1973 forward are based on 1967 expenditures. The revised series are linked to their predecessors at April 1973. For further explanation see page 95.
- (2) As of January 1975, the separate consumer price indexes for Saskatoon, Regina, Edmonton and Calgary supersede the combined-cities series. Users of the combined series are therefore advised to switch to the separate city indexes which are available only from April 1973. Should users have any questions, contact the Consumer Prices Section or consult the Retail Prices and Living Costs Service Bulletin, Catalogue 62-005, Volume 3, No. 5.
- (3) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.
- (4) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 96.

- (1) Avant mai 1973, les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957 (pour Québec et Thunder Bay sur les dépenses de 1964); à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 95.
- (2) A partir de janvier 1975, les indices séparés des prix à la consommation pour Saskatoon, Regina, Edmonton et Calgary remplacent les séries combinées. Nous conseillons donc aux utilisateurs des séries combinées d'utiliser les séries des indices séparés qui sont disponibles depuis avril 1973. Si il y a des questions, communiquez avec la section des prix aux consommateurs ou consultez le Bulletin de service sur les prix de détail et les coûts de la vie, no 62-005 au catalogue, volume 3, no 5.
- (3) Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.
- (4) Comprend le logement et l'entretien du ménage. Jusqu'en avril 1963, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 96.

## EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR PRICE SERIES

### Industrial Price Indexes

#### Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue 62-528.

#### Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

#### "Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

## EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES SÉRIES DE PRIX

### Indices des prix industriels

#### Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans: "Indices des prix de vente dans l'industrie, 1956-68", (n° 62-528) au catalogue).

#### Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

#### "Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

# **Purchase Price Indexes of Secondary Metals** (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

## **Canadian Farm Products Price Index** (1935-39 = 100)

Prices for Western grains used in the index are Canadian Wheat Board buying prices for grain in store at Vancouver or Thunder Bay.

Final payments for the crop year August 1973 - July 1974 were announced on December 24, 1974 and have been incorporated into the index. Estimates for the total 1974-75 payments are based on the initial payment plus half of the 1973-74 crop year final payment.

# **Indices du prix d'achat des métaux de deuxième fusion** (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

## **Indice des prix des produits agricoles canadiens** (1935-39 = 100)

Les prix des céréales de l'Ouest utilisés dans l'indice sont les prix d'achat de la Commission canadienne du blé pour les céréales entreposées à Vancouver ou à Thunder Bay.

Les paiements finals pour la campagne agricole août 1973 - juillet 1974 ont été annoncés le 24 décembre 1974 et ont été incorporés à l'indice. Les estimations des paiements totaux de 1974-75 sont basées sur le paiement initial plus la moitié du paiement final de la campagne agricole 1973-74.

(2) Used in index from August 1974 forward. — Utilisé à partir de l'indice d'août 1974.

## General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue 62-501).

## Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

## Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, ce indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix de produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (n° 62-501 au catalogue).

## Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

#### **The Consumer Price Index for Canada (1971 = 100)**

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In August 1975, the time base was updated to 1971 = 100 from 1961 = 100.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision based on 1967 Expenditures)*, Catalogue 62-539.

#### **The Consumer Price Index for Canada Reclassified by Goods and Services**

A revised supplementary classification system, entitled "The Consumer Price Index reclassified by Goods and Services", was introduced in May 1973 with the revision of

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

#### **L'indice des prix à la consommation pour le Canada (1971 = 100)**

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En août 1975, on a aligné la base de temps de 1961 = 100 à 1971 = 100.

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, (n° 62-518 au catalogue). En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, (n° 62-539 au catalogue).

#### **L'indice des prix à la consommation au Canada reclassé par biens et services**

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que

the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

### Consumer Price Indexes for Regional Cities (1971 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévue. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961 - avril 1973, dans la publication "Prix à la consommation au détail et coût de la vie" - Bulletin de service, n° 62-005 : catalogue, vol. 2 n° 7.

### Indices des prix de la consommation dans certaines agglomérations urbaines (1971 = 100)

Ces indices sont publiés tous les mois dans la présente publication (tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de quotations, ces indices sont en général semblables par leur concept et par leur couverture à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada comprenait et ne comprend toujours que les changements de loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement pris ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

## Purchasing Power of the 1971 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1975, compared with their average level in 1971, consumer prices as measured by the C.P.I. were 32.4% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1971 would cost the consumer \$132.40 in January 1975. Each consumer dollar in January 1975, therefore, buys less than in 1971, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1975 the purchasing power of the 1971 consumer dollar declined to approximately 76 cents ( $\$1.00 \times 100.0/132.4 = \$0.76$ ).

Users of the tabulation which shows the purchasing power of the 1971 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

## Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them if the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is

## Pouvoir d'achat du dollar de consommation 1971

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1975, par rapport au niveau de 1971, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 32.4%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1971 aurait coûté \$132.40 en janvier 1975 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1975 achète moins qu'en 1971, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1975, le pouvoir d'achat du dollar de consommation 1971 était tombé approximativement à 76 cents ( $\$1.00 \times 100.0/132.4 = \$0.76$ ).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1971 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

## Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation.

\$90.91  $((100.0/110.0) \times \$100)$ , which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6  $((90.91/80.00) \times 100)$ . Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages  $((\$100.00-\$80.00/\$80.00) \times 100)$ .

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4  $((146.23/74.45) \times 100)$ . The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98  $((146.23/142.0) \times 100)$ . (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3  $((102.98/74.45) \times 100)$ .

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce

tion. La moyenne ajustée sera \$90.91  $((100.0/110.0) \times 100)$ , que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6  $((90.91/80.00) \times 100)$ . On pourra appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine permettra aux consommateurs d'acheter pour 13.6% de plus de biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires  $((\$100.00-\$80.00/\$80.00) \times 100)$ .

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars courants (1961 = 100) est 196.4  $((146.23/74.45) \times 100)$ . Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98  $((146.23/142.0) \times 100)$ . (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3  $((102.98/74.45) \times 100)$ .

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie

savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

### Inter-City Retail Price Comparisons

Measurements of retail price differentials prevailing between a number of Canadian urban centres previously published to reflect inter-city comparisons as of May 1965, May 1968, May 1969 and May 1971 have been revised to February 1975.

In this new series of updatings inter-city price comparisons will be drawn for goods and services comprising most of the budget on which the Consumer Price Index for Canada is currently based.

Table 14 presents the first five components of goods and services to be updated in this series. Price indexes for additional budget elements will be published on a component-by-component basis as each stage of these results becomes available. The data base for this study was the wide range of retail price quotations collected in the course of production of the national Consumer Price Index in addition to supplementary information gathered in a special program of pricing undertaken for publication of City Average Retail Prices(1).

As previously, to facilitate price comparability between locations, differential price measurements are derived between separate pairs of cities in geographic proximity to each other. Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names wherever possible, and also having regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, paired city indexes are initially related to a common base city and

du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

### Comparaisons entre les prix de détail d'une ville à l'autre

Les mesures de la disparité des prix de détail qu'on observe dans un certain nombre de centres urbains du Canada, déjà publiées afin de donner les comparaisons entre les villes aux mois de mai 1965, mai 1968, mai 1969 et mai 1971 ont été révisées en février 1975.

Les nouvelles séries de mises à jour seront faites pour la plupart des biens et services servant actuellement à établir l'indice des prix à la consommation du Canada.

On trouvera au tableau 14, les résultats de la mise à jour des cinq premières composantes. Pour ce qui est des autres éléments du budget à la consommation, on publiera des indices de prix différentiels, composante par composante, au fur et à mesure que les résultats d'enquête seront disponibles. Les données de base pour cette étude ont été constituées par l'importante collection recueillie pour la production de l'indice national des prix à la consommation en plus de l'information supplémentaire obtenue dans le cadre d'un programme spécial de relevé des prix, dont les résultats permettent de publier les prix de détail moyens par ville(1).

Comme par le passé, afin de faciliter la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour des paires de villes géographiquement proches. A l'intérieur de chaque paire de villes, les prix ont été assortis au niveau de l'article, c'est-à-dire en s'assurant que les spécifications étaient semblables, y compris la marque lorsque cela était possible, et aussi en tenant compte de la similitude des points de vente au détail et des méthodes de vente. En utilisant la méthode de couplage, les indices couplés des villes ont d'abord été

(1) Retail Prices and Living Costs Service Bulletin, Vol. 4, No. 2, February, 1975.

(1) Bulletin de Service; Prix de détail et Coût de la Vie, Vol. 4, No 2, février 1975.

subsequently compared with a weighted average of the combined 11 cities equalling 100. This is a departure from previous such studies which were based on Winnipeg price levels equalling 100. Item price relationships are aggregated by application of the 1967 combined cities weighting diagram updated for price change to February 1975.

Further information regarding Table 14 can be obtained from: Comparative Living Costs Section, Prices Division, Statistics Canada.

#### Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

#### Security Price Indexes

Revised security price indexes on the base 1971 = 100 were presented for the first time in the May 1975 issue of this publication. The revision constitutes changes in the composition and method of calculation of the indexes as well as a shift in the price reference base from 1961 to 1971.

reliés à une ville de base commune, puis comparés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Ceci constitue une différence entre cette étude et les études précédente qui posaient le niveau des prix de Winnipeg comme étant égal à 100. Les relations de prix des articles ont été regroupées en appliquant le schéma de la pondération de 1967 des villes combinées mis à jour en fonction des variations de prix observées en février 1975.

De plus amples renseignements concernant le tableau 14 peuvent être obtenus de: la Section des coûts comparatifs de la vie, Division des Prix, Statistique Canada.

#### Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (n° 62-004 au catalogue) et dans le bulletin annuel *Prices and Price Indexes* (n° 62-002 au catalogue).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour en cours on a cessé de la publier.

#### Indices des cours des valeurs mobilières

Les indices révisés des cours des valeurs mobilières sur la base 1971 = 100 ont été présentés pour la première fois dans le numéro de mai 1975 de cette publication. Cette révision comporte des changements à la composition et à la méthode de calcul des indices. Par ailleurs, la base de référence des prix 1961 a été changée en celle de 1971.

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held for investment purposes. The portfolio represents stocks of Canadian companies listed on at least one Canadian exchange. The number of shares held for each issue is in proportion to the total number of shares outstanding as of January 1 of each year.

The indexes are calculated using the Laspeyres index formula. Prices for the weekly common stock indexes are the daily closing quotations from the exchange with the highest volume for each stock, averaged over the number of trading days in the particular week. For preferred stock, prices used are the monthly weighted averages of daily closing quotations in which the weights are the daily total sales. Index weighting at the group and sub-group level are based on the average yearly volume of shares traded over the period 1971 to 1974.

The stocks included in the indexes are classified according to the Standard Industrial Classification (revised 1970). Two new sub-groups have been established as part of the Investors Index: Radio and Television Broadcasting has been added to Utilities while Insurance has been added to the Finance group. The order of the sub-groups has been slightly rearranged and two sub-groups (Alcoholic Beverages and Trade) have undergone minor name changes.

For the list of stocks currently included in the indexes, see the special supplement in the May issue of Prices and Price Indexes.

### Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Les indices des cours des valeurs mobilières mesurent dans le temps les effets du mouvement des prix sur les valeurs d'un portefeuille d'actions achetées et détenues aux fins de placement. Ce portefeuille comprend des actions de sociétés canadiennes cotées à au moins une bourse du Canada. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation au 1er janvier de chaque année.

Les indices sont calculés d'après la formule de Laspeyres. Les prix servant au calcul des indices hebdomadaires sont les cours quotidiens de clôture pour la bourse où le volume des transactions est le plus élevé pour chaque titre. Ils sont ensuite mis en moyenne selon le nombre de jours ouvrables d'une semaine déterminée. En ce qui concerne les actions privilégiées, les prix utilisés sont les moyennes mensuelles pondérées des cours quotidiens de clôture dans lesquels les pondérations sont les ventes totales quotidiennes. Les pondérations des groupes principaux et des sous-groupes sont basées sur le volume annuel moyen de titres vendus au cours de la période 1971-1974.

Les actions faisant partie des indices sont classés selon la Classification des activités économiques de 1970. Deux nouveaux sous-groupes ont été créés en tant que partie de l'indice des cours des actions ordinaires: la radiodiffusion et la télédiffusion ont été ajoutées aux services tandis que les assurances ont été ajoutées au groupe des finances. Par ailleurs, l'ordre des sous-groupes a été modifié et le nom de deux d'entre eux (boissons alcooliques et commerce) a été changé.

Pour la liste des actions habituellement comprises dans les indices, consulter le supplément spécial dans l'édition de mai de la publication Prix et indices des prix.

### Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.
